3.2 Audience

This document is intended for hospital staff, health system integrators, software designers or implementers. The reader should have a basic understanding of DICOM.

3.3 Remarks

If another device matches this conformance statement based on the comparison with its own conformance statement, there is a chance, but no guarantee, that they interoperate. DICOM only deals with communication; it does not specify what is needed for certain applications to run on a device.

4 Networking

4.1 Implementation Model

4.1.1 Application Data Flow

The ATLAS 9000 3.0 Software works together with network components to provide connectivity to a DICOM network.

4.1.2 Functional Definition Of AEs

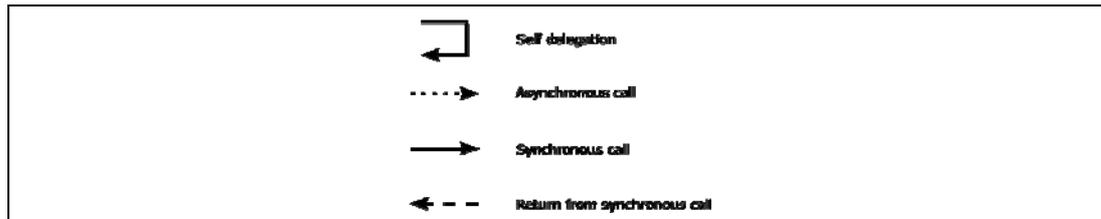

4.1.2.1 ATLAS 9000 3.0 Overview

ATLAS 9000 software version 3.0 provides primarily new features for assisting in contact lens selection (MasterFit II) and some additional new features:

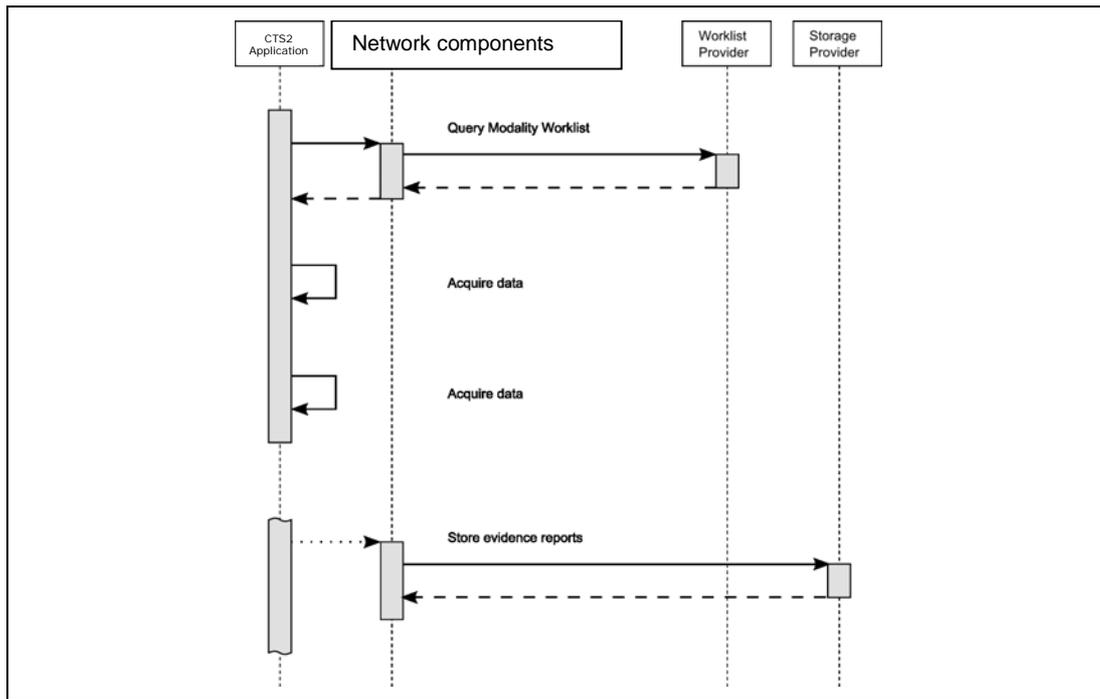

- Integration with iProfiler (corneal topographer) data
- Exam Preview feature which allows operator to choose from among four acquisitions
- Ability to turn Smart Capture off
- Trend Analysis display which displays a new data item: sagittal height
- RMS Low and High Order values
- DICOM connectivity

4.1.3 Sequencing of Real-World Activities

To realize the real world activities, the different entities work together. The sequence diagrams shall depict the intended workflow.

The diagrams uses slightly modified UML symbols. The asynchronous call is not depicted as suggested in UML. Some objects do have more than one dashed line. It symbolizes more than one thread.

All activities are initiated by an operator.

Query Modality Worklist

ATLAS 9000 3.0 queries for work items related to the current day's worklist. According to the transferred data ATLAS 9000 3.0 creates entries in the local database (Patient, Study (Requested Procedure), Procedure Steps). The list of imported patients is displayed to the operator in the patient Browser. The operator can now select the patient for data acquisition.

Acquire data

The operator acquires data from patient's eye using ATLAS 9000 3.0.

Store evidence reports

The operator can trigger this activity by a click on a button.

4.2.1.4 Association Acceptance Policy

The ATLAS 9000 3.0 does not accept Associations.

4.3 Network Interfaces

4.3.1 Physical Network Interface

The physical network interface is not visible for the applications. The application uses the communication stack as offered by the Operating System.

4.3.2 Additional Protocols

No additional protocols are supported.

4.4 Configuration

4.4.1 AE Title/Presentation Address Mapping

The mapping from AE Title to TCP/IP addresses and ports is configurable and set at the time of installation by Installation Personnel.

4.4.1.1 Local AE Titles

The IP is administrated by the Operating System and networking environment. The calling AET is configurable. The calling AET is the AET of the ATLAS 9000 3.0.

4.4.1.2 Remote AE Titles

The mapping of external AE Titles to TCP/IP addresses and ports is configurable. The ATLAS 9000 3.0 allows setting up one AE as Modality Worklist Provider and one AE as Storage Provider. For both AEs, the host or IP, the Port and the Application Entity Title must be known.

4.4.2 Parameters

4.4.2.1 Storage SCU Parameters

The association initiation timeout is configurable. Default is 10 seconds.

For ATLAS 9000 3.0 the selectable compressions for the IODs are:

- Multi-frame True Color Secondary Capture
 - No Compression
 - RLE Compression
 - JPEG Baseline Compression
- Encapsulated PDF
 - No selection possible

5 Media Interchange

Media Interchange is not scope of this document since Media Interchange is not supported by ATLAS 9000.

6 Support Of Character Sets

In addition to the default character repertoire, the Specific Character Set ISO IR 100 ("Latin alphabet No. 1") is supported.

7 Security

The DICOM capabilities of the ATLAS 9000 3.0 Application do not support any specific security measures. It is assumed that ATLAS 9000 3.0 Application is used within a secured environment. It is assumed that a secured environment includes at a minimum:

- Firewall or router protections to ensure that only approved external hosts have network access to ATLAS 9000 3.0 Application.
- Firewall or router protections to ensure that ATLAS 9000 3.0 Application has network access to approved external hosts and services.
- Any communication with external hosts and services outside the locally secured environment use appropriate secure network channels (e.g. such as a Virtual Private Network (VPN))
