## Phaco Spatula

The double-ended Milder phaco spatula from Katena features, at one end, a chopper with an inferior edge for horizontal division of a soft-to medium-density nucleus as well as a wedge-shaped posterior tip for vertically chopping a harder nucleus. The chopper is offset 60 degrees, allowing the surgeon to use it through a paracentesis incision and chop toward the phaco probe.

On the opposite end of the instrument is a spatula with

a disc-shaped tip, which can be used to stabilize the globe and manipulate nucleus fragments.

## Low Vision Products

Optelec has introduced three new products.

The Optelec **FarView** is a portable magnification device that allows users to access, store, review and share information. It features a built-in auto-focus camera, zoom-in functionality and scrolling.

The Optelec **ClearView+ G2** is a desktop electronic video magnifier that allows

the user to read and write with magnified and illuminated viewing assistance. It features a five-directional arm, 90-degree rotating screen, high-definition image quality and Reon HQV image processing technology, which Optelec says eliminates image fading and eye fatigue.

The Optelec **ClearNote Portable** is a lightweight portable video magnifier that combines distance, document and self-viewing modes. This laptop magnification solution connects to any computer via the USB port.
