- A young-adult has uveitis, low back pain and diarrhea. He is HLA-B27 positive. What entity should come to mind first? **IBD**
- In the initial, leptospiremic phase of leptospirosis, what eye finding is considered pathognomonic for the disease? **Circumcorneal conjunctival congestion**
- In posterior uveitis in a person who owns or works with dogs and/or cats, what two entities should come to mind? **Toxoplasmosis and toxocariasis**
- Who is the typical TINU pt? **A female age 16-30**
- What is the descriptive term for the appearance of sarcoid periphlebitis?  
**Candle-wax drippings**
  - What is the French-language term for *candle-wax drippings*? **Taches de bougie**
- Which two primary cancers are most likely to metastasize to the choroid and masquerade as a choroiditis? **Breast and lung**
- TB can present as an occlusive peripheral vasculitis of the retina. What is the eponymous name for this presentation? **Eales disease**
- An adolescent c/o decreased vision. DFE reveals severe macular chorioretinitis. Two months later, the adolescent begins to demonstrate cognitive and motor decline. What does he have? **Subacute sclerosing panencephalitis (SSPE)**

# Uveitis: *Quick Hitters Part One*

- A young-adult has uveitis, low back pain and diarrhea. He is HLA-B27 positive. What entity should come to mind first? **IBD**

- What is the most common neoplastic masquerade syndrome in adults? **Primary CNS lymphoma**
- In one word (**not** ‘uveitis’), what sort of condition is Behçet? **A vasculitis**
- What findings comprise the classic triad of ocular histo?

# Uveitis: *Quick Hitters Part One*

- What class of medicine is considered first-line treatment for ankylosing spondylitis? **NSAIDs**
- When you hear ‘bacterial endogenous endophthalmitis in a recent émigré from Asia,’ what bug should come to mind? ***Klebsiella***
- What animals are the primary hosts for the *Toxocara* species implicated in the majority of ocular toxocariasis cases? **Dogs and cats**
- A pt with acute-onset sarcoidosis has fever, arthralgias, erythema nodosum, hilar adenopathy and acute iritis. What is this condition? **Löfgren syndrome**
- In neuroretinitis, which layer of the retina contains the exudates forming the macular star? **The outer plexiform (aka *Henle’s*) layer**
- Who is the typical ankylosing spondylitis pt? **A white male age 16-40**
- Which uveitis entity is notorious for causing Bell’s palsy? **Lyme**
- What is the most common neoplastic masquerade syndrome in adults? **Primary CNS lymphoma**
- In one word (**not** ‘uveitis’), what sort of condition is Behçet? **A vasculitis**
- What findings comprise the classic triad of ocular histo? **Peripapillary atrophy, punched out lesions (‘histo spots’) and macular disciform lesions/scars**

*Subfoveal CNVM*
- What is the common name for measles? *Rubeola*
- Two conditions associated with *mutton-fat* KP: *Sarcoid; TB*
- What are the three presentation types of Rb, and which can masquerade as uveitis? *Exophytic, endophytic and diffuse infiltrating (the masquerade form)*
- Re posterior uveitis in a person of Native-American ancestry, what entity should come to mind first? *VKH*
- When you hear ‘fungal endogenous endophthalmitis in a hospitalized pt,’ what bug should come to mind? *Candida*
- What sort of bug is *Histoplasma capsulatum*? *A fungus*

# Uveitis: *Quick Hitters Part One*

- In the US, who is the typical ocular histo pt? *A non-Hispanic white person*
- Re posterior uveitis in a person of Turkish, Lebanese, Greek or Iranian ancestry, what entity should come to mind first? *Behçet*
- What is the usual cause of significant vision loss in ocular histo?  
*Subfoveal CNVM*
- What is the common name for measles? *Rubeola*
- Two conditions associated with *mutton-fat* KP: *Sarcoid; TB*
- What are the three presentation types of Rb, and which can masquerade as uveitis? *Exophytic, endophytic and diffuse infiltrating (the masquerade form)*
