
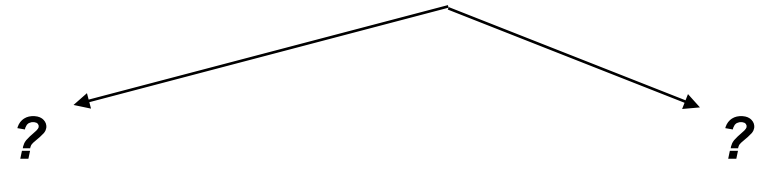
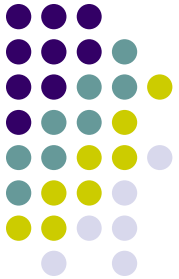
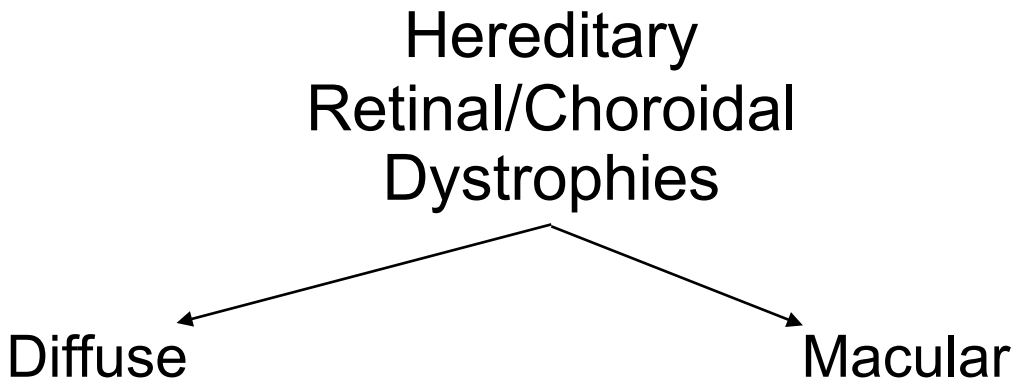
Hereditary Retinal/Choroidal Dystrophies



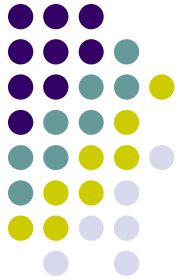
The Retina *book divvies the hereditary retinal/choroidal dystrophies into two groups—what are they?*





The Retina *book divvies the hereditary retinal/choroidal dystrophies into two groups—what are they?*

Those that affect the entire retina vs those affecting the macula only

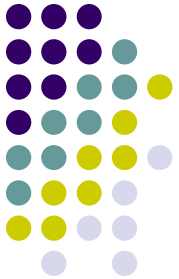


Hereditary Retinal/Choroidal Dystrophies

Diffuse **Macular**

So when you think about the retinal/choroidal dystrophies, the first thing to recall is that they come in two basic flavors—*macular* and *diffuse*

No question—proceed when ready



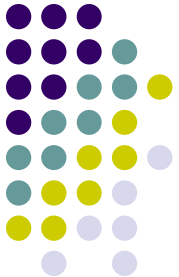
Hereditary Retinal/Choroidal Dystrophies

Diffuse **Macular**

Spoiler alert: There is **one** retinal dystrophy (and a highly testable one at that) which doesn't fit neatly into the *diffuse* vs *macular* system. (We'll get to it at the end of the set.)

?

No question—proceed when ready



Hereditary Retinal/Choroidal Dystrophies

Diffuse

Macular

- *One of two with* macular *in its name* — ?
- *This one is the best* — ?
- *The star of the mac dystrophies* — ?
- *A group of non-lookalike conditions* — ?
- *Looks like GA* — ?
- *The other with* macular *in its name* — ?

What are the hereditary macular dystrophies covered in the Retina *book?*

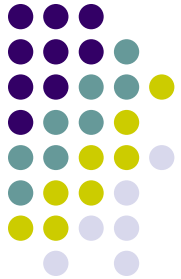
Hereditary Retinal/Choroidal Dystrophies

Diffuse

Macular

What are the hereditary macular dystrophies covered in the Retina *book?*

- *One of two with* macular *in its name* — Sorsby macular dystrophy
- *This one is the best* — Best dz
- *The star of the mac dystrophies* — Stargardt
- *A group of non-lookalike conditions* — Pattern dystrophies
- *Looks like GA* — Central areolar choroidal dystrophy
- *The other with* macular *in its name* — North Carolina macular dystrophy



Hereditary Retinal/Choroidal Dystrophies

- Diffuse
- Macular
  - **Sorsby macular dystrophy**
  - Best dz
  - Stargardt
  - Pattern dystrophies
  - Central areolar choroidal dystrophy
  - North Carolina macular dystrophy

What is the classic (and unfortunate) manifestation of Sorsby's?

Hereditary Retinal/Choroidal Dystrophies

Diffuse

Macular

- **Sorsby macular dystrophy**
- Best dz
- Stargardt
- Pattern dystrophies
- Central areolar choroidal dystrophy
- North Carolina macular dystrophy

What is the classic (and unfortunate) manifestation of Sorsby's?

Bilateral CNVMs occurring at around age #

Hereditary Retinal/Choroidal Dystrophies

Diffuse

Macular

- **Sorsby macular dystrophy**
- Best dz
- Stargardt
- Pattern dystrophies
- Central areolar choroidal dystrophy
- North Carolina macular dystrophy

What is the classic (and unfortunate) manifestation of Sorsby's?

Bilateral CNVMs occurring at around age 40

Sorsby: Active CNVM OD, already (disciform) scarred OS

--**A**dult-onset foveomacular **vitelliform** dystrophy

Are the vitelliform lesions of AOFVD similar to those of Best dz?
Yes, although they tend to be somewhat smaller

Do Best dz and AOFVD share a common genetic heritage?
You'd think so, but no—they're genetically unrelated

Is the EOG abnormal in AOFVD, like it is in Best dz?
Again, you'd think so, but no—EOG is normal in AOFVD

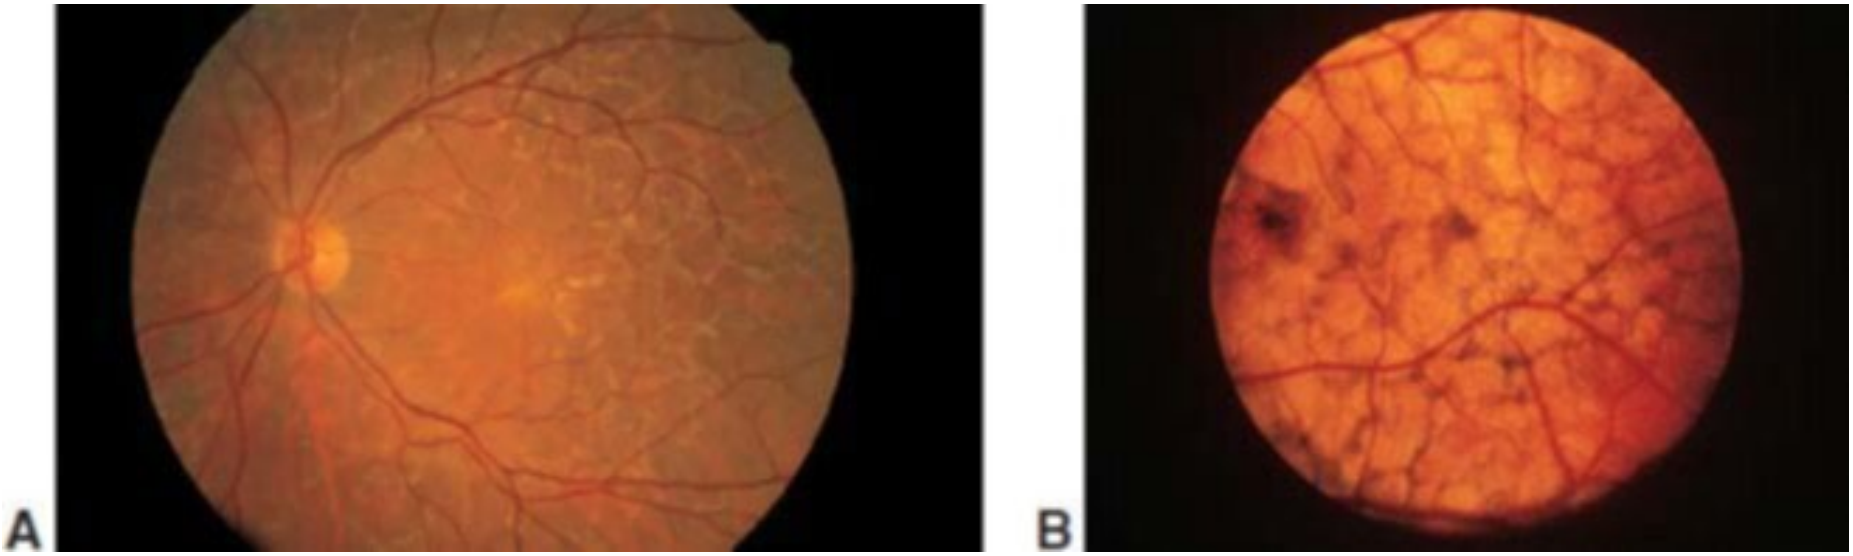
- **Pattern dystrophies**
- Central areolar choroidal dystrophy
- North Carolina macular dystrophy

Briefly, what is a pattern dystrophy*?*
An inherited macular dystrophy that has a characteristic appearance (ie, a particular 'pattern')

The Retina *book identifies four pattern dystrophies—what are they?*
--**B**utterfly dystrophy
--**A**dult-onset foveomacular vitelliform dystrophy
--**R**eticular dystrophy
--**F**undus pulverulentus

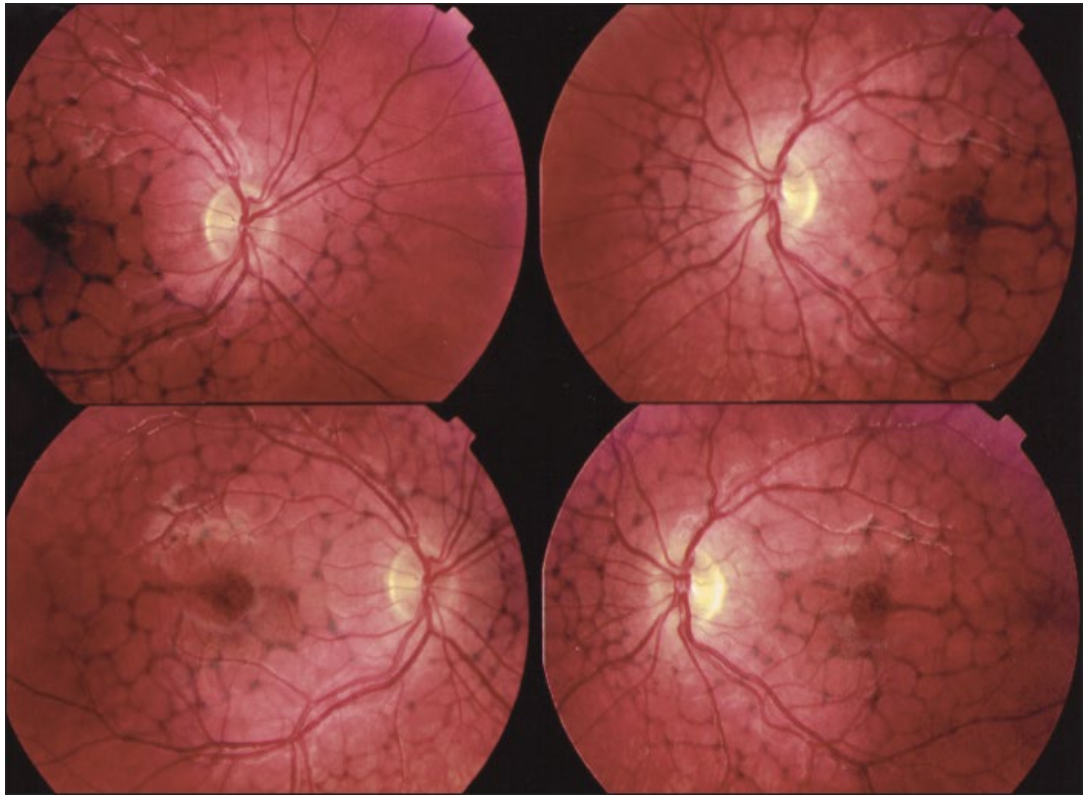
Likewise, the *Retina* book says essentially nothing about reticular dystrophy or fundus pulverulentus (but does show a couple of pics of reticular)

Do the macular 'patterns' appear early in life?
Generally no—they usually show up in middle adulthood



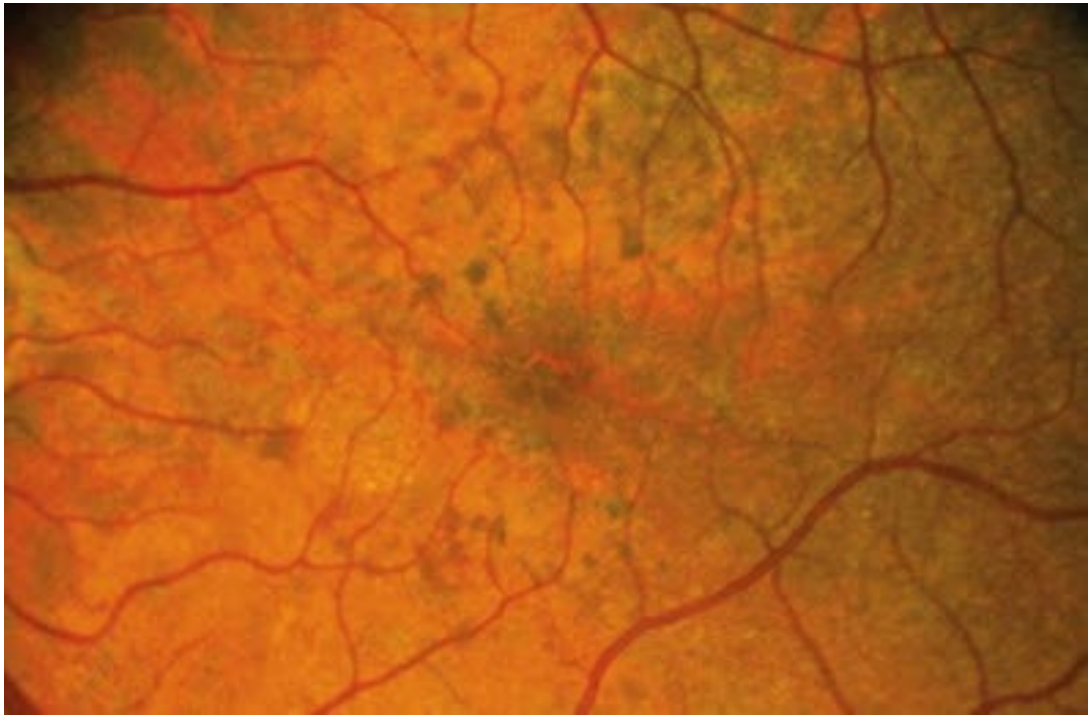
Fundus photos show 2 examples of reticular-type pattern dystrophy, characterized by a “fishnet” pattern of yellowish-orange (A) or brown (B) pigment deposition in the posterior fundus

--**B**utterfly dystrophy
--**A**dult-onset foveomacular vitelliform dystrophy
--**R**eticular dystrophy
--**F**undus pulverulentus



Symmetrical and reticular pattern of accumulated pigment in the fovea that radiates from the center to the periphery like a “fishnet with knots.”

--**B**utterfly dystrophy
--**A**dult-onset foveomacular vitelliform dystrophy
--**R**eticular dystrophy
--**F**undus pulverulentus



A pic of fundus pulverulentus, just because

--**B**utterfly dystrophy
--**A**dult-onset foveomacular vitelliform dystrophy
--**R**eticular dystrophy
--**F**undus pulverulentus

Hol up: 'Atrophic changes with a scalloped border and nyctalopia + VF loss' ? That's the description just given for gyrate. How are you supposed to tell these apart in the clinic?
The short answer is, you may not be able to. There is considerable phenotypical and clinical overlap among the choroidal dystrophies, to the extent that it is injudicious to treat any particular presentation as pathognomonic.

Rod-dominan

dz

jardt

Rod-cone (RP)

Cone/cone-rod

Spoiler alert: There is **one** retinal dystrophy (and a highly testable one at that) which doesn't fit neatly into the *diffuse* vs *macular* system. (We'll get to it at the end of the set.)

Note: There is some disagreement within the *BCSC* regarding how X-linked retinoschisis should be classified. Whereas the *Retina* book calls it an *inner retinal dystrophy*…the *Peds* book classifies it as a *hereditary vitreoretinopathy**. Caveat emptor.

Hereditary vitreoretinopathy (per the *Peds* book)

X-linked retinoschisis

*As to *why* they do this, we will see shortly

By what other (very similar) name is X-linked ***retinoschisis*** *(XLR) known?*

Before we get any deeper—what does retinoschisis *refer to in this context?*

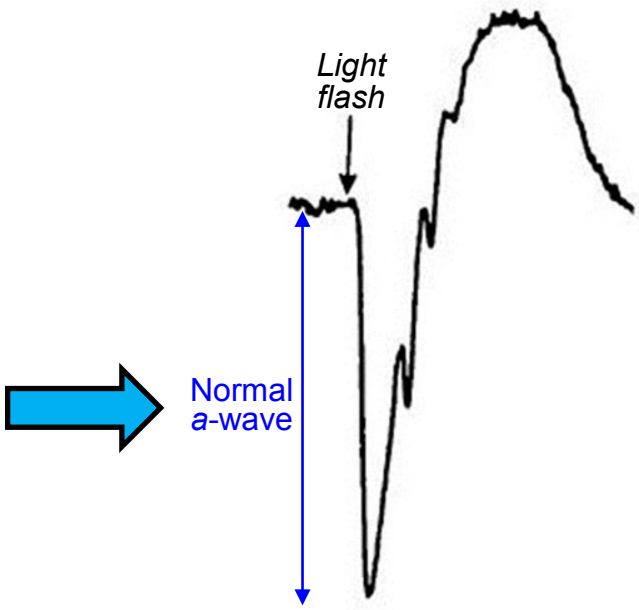
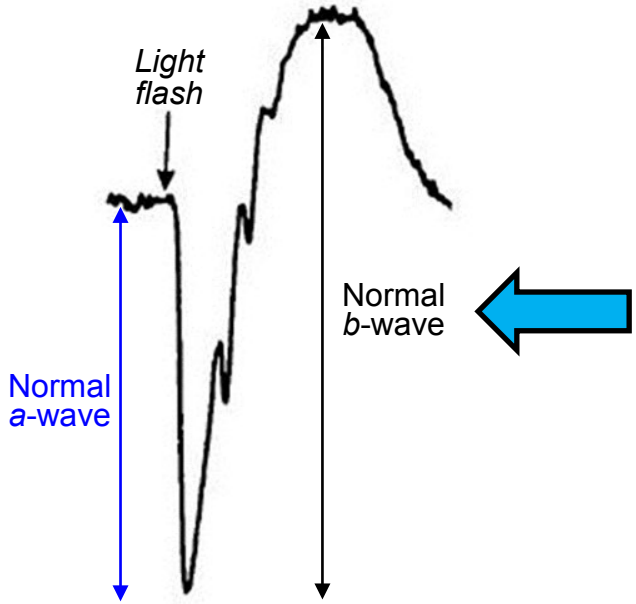
The *a*-wave represents [redacted] function

Normal ffERG



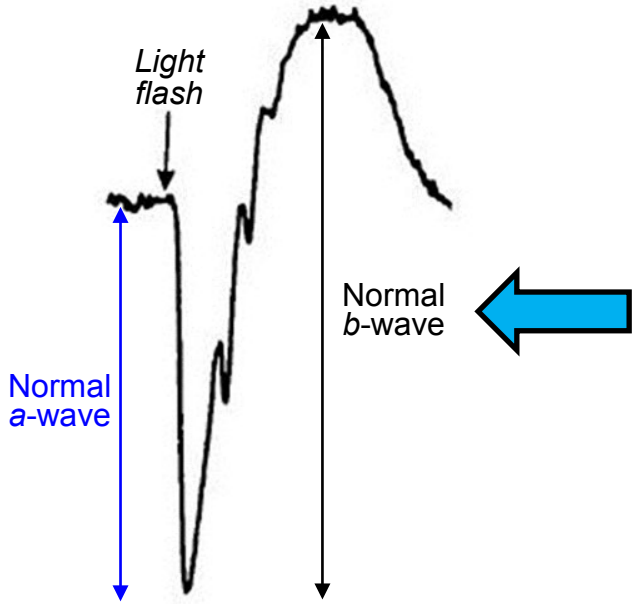
The normal ffERG. Note:
--The response commences with the stimulus flash
--The first deflection—the ***a*-wave**—is sharply downward.
The *a*-wave represents photoreceptor function

Normal ffERG



The normal ffERG. Note:
--The response commences with the stimulus flash
--The first deflection—the ***a*-wave**—is sharply downward.
The *a*-wave represents photoreceptor function
--The second deflection—the ***b*-wave**—is upward. While not quite as steep as the *a*-wave, it is of substantially greater amplitude.

Normal ffERG



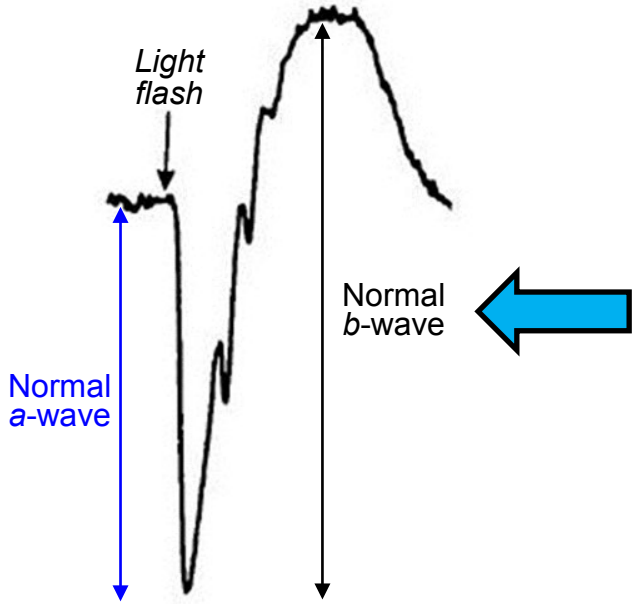
The normal ffERG. Note:

--The response commences with the stimulus flash

--The first deflection—the ***a*-wave**—is sharply downward.
The *a*-wave represents photoreceptor function

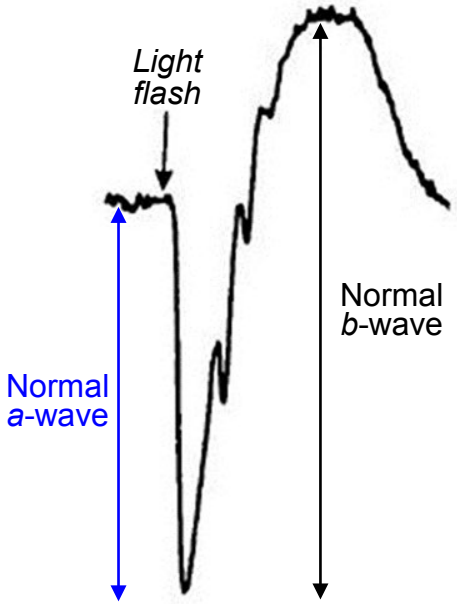
--The second deflection—the ***b*-wave**—is upward. While not quite as steep as the *a*-wave, it is of substantially greater amplitude.
The *b*-wave represents function of the two words

Normal ffERG



The normal ffERG. Note:
--The response commences with the stimulus flash
--The first deflection—the ***a*-wave**—is sharply downward.
The *a*-wave represents photoreceptor function
--The second deflection—the ***b*-wave**—is upward. While not quite as steep as the *a*-wave, it is of substantially greater amplitude.
The *b*-wave represents function of the inner retina

Normal ffERG



Note: This is a significant oversimplification of ERG interpretation, That said, I *think* it's enough to get you through the OKAP and Boards. But caveat emptor, bro.

The normal ffERG. Note:

--The response commences with the stimulus flash

--The first deflection—the ***a*-wave**—is sharply downward.

The *a*-wave represents photoreceptor function

--The second deflection—the ***b*-wave**—is upward. While not quite as steep as the *a*-wave, it is of substantially greater amplitude.

The *b*-wave represents function of the inner retina

Inner retinal dystrophy
└ X-linked retinoschisis

By what other (very similar) name is X-linked retinoschisis (XLR) known?
X-linked juvenile retinoschisis

How does it present on DFE?
With macular schisis in a radial pattern, +/- peripheral schisis

How does it present clinically?
With modestly decreased VA in childhood. Over time, VA will drop to 20/200 or so.

What is the underlying pathophysiology?
Defective function of the *retinoschisin* protein

What ocular structure—unmentioned previously in this set—is affected by XLR?
The vitreous—it is syneretic , and contains veils and other opacities

Pts must adhere to a specific lifestyle modification—what is it?
No contact sports—XLR retinas are highly susceptible to trauma-induced RD

The vitreous—it is syneretic , and contains veils and other opacities

Pts must adhere to a specific lifestyle modification—what is it?
No contact sports—XLR retinas are highly susceptible to trauma-induced RD

The chronic presence of fluid within macular schisis cavities is felt to contribute to long-term visual morbidity in XLR. What simple intervention may ameliorate this?
