What are the four categories of corneal dystrophies?
Corneal Dystrophies

Epithelial and Subepithelial Dystrophies

Epithelial-Stromal \textit{TGFB1} Dystrophies

Stromal Dystrophies

What are the four categories of corneal dystrophies?

Endothelial Dystrophies
Epithelial and Subepithelial Dystrophies

Epithelial-Stromal TGFBI Dystrophies

*What does TGFBI stand for in this context?*

Stromal Dystrophies

Endothelial Dystrophies
Corneal Dystrophies

Epithelial and Subepithelial Dystrophies

**Epithelial- Stromal** TGFBI **Dystrophies**

*What does TGFBI stand for in this context?*  
‘Transforming growth factor beta induced’

Stromal Dystrophies

Endothelial Dystrophies
Corneal Dystrophies

Epithelial and Subepithelial Dystrophies

Epithelial-Stromal TGFBI Dystrophies

What does TGFBI stand for in this context? ‘Transforming growth factor beta induced’

To what does the term growth factor refer?

Endothelial Dystrophies
Epithelial and Subepithelial Dystrophies

What does TGFBI stand for in this context? ‘Transforming growth factor beta induced’

To what does the term growth factor refer? To any of a diverse group of protein (or steroid) molecules that promote cell growth

Corneal Dystrophies

Endothelial Dystrophies
Epithelial and Subepithelial Dystrophies

What does TGFBI stand for in this context?
‘Transforming growth factor beta induced’

To what does the term growth factor refer?
To any of a diverse group of protein (or steroid) molecules that promote cell growth

Which growth factor is likely most familiar to ophthalmologists?
growth factor

Endothelial Dystrophies
What does TGFBI stand for in this context?
‘Transforming growth factor beta induced’

To what does the term growth factor refer?
To any of a diverse group of protein (or steroid) molecules that promote cell growth

Which growth factor is likely most familiar to ophthalmologists?
Vascular endothelial growth factor

Epithelial and Subepithelial Dystrophies
Endothelial Dystrophies

Stromal Dystrophies

Epithelial-Stromal Dystrophies

What does \( \text{TGFBI} \) stand for in this context? 'Transforming growth factor induced'

To what does the term 'transforming growth factor' refer?

Stromal Dystrophies

Epithelial and Subepithelial Dystrophies
Corneal Dystrophies

Epithelial and Subepithelial Dystrophies

Epithelial-Stromal TGFBI Dystrophies

What does TGFBI stand for in this context? 'Transforming growth factor beta induced'

To what does the term transforming growth factor refer? A superfamily of related growth factors

Stromal Dystrophies

Endothelial Dystrophies
Epithelial and Subepithelial Dystrophies

What does TGFBI stand for in this context? 'Transforming growth factor beta induced'

To what does the term transforming growth factor beta refer?

Endothelial Dystrophies
Corneal Dystrophies

Epithelial and Subepithelial Dystrophies

Epithelial-Stromal $TGFBI$ Dystrophies

What does $TGFBI$ stand for in this context? 'Transforming growth factor beta' induced

To what does the term transforming growth factor beta refer? A subclass of transforming growth factors (the other subclass is, not surprisingly, transforming growth factor alpha)

Endothelial Dystrophies
Epithelial and Subepithelial Dystrophies

**Epithelial-Stromal TGFBI Dystrophies**

*What does TGFBI stand for in this context?*

Transforming growth factor beta induced

*To what does the term transforming growth factor beta induced refer?*
What does TGFBI stand for in this context?

'Transforming growth factor beta induced'

To what does the term *transforming growth factor beta induced* refer?

It refers to a protein, the production of which is controlled by a product of the *transforming growth factor beta* family.
Corneal Dystrophies

Epithelial and Subepithelial Dystrophies

Epithelial-Stromal \textbf{TGFBI} Dystrophies

What does \textbf{TGFBI} stand for in this context?

- Transforming growth factor beta induced

To what does the term transforming growth factor beta refer?

- It refers to a protein, the production of which is controlled by a product of the transforming growth factor beta family.

What is the name of the protein involved in the TGFBI dystrophies?

- Keratoepithelin (the Cornea book refers in passing to the TGFBI conditions as keratoepithelin dystrophies)

What is the clinical hallmark of the keratoepithelin dystrophies?

- Recurrent epithelial erosions

Endothelial Dystrophies
Corneal Dystrophies

Epithelial and Subepithelial Dystrophies

Epithelial-Stromal TGFBI Dystrophies

What does TGFBI stand for in this context?
Transforming growth factor beta induced

What is the name of the protein involved in the TGFBI dystrophies?
Keratoepithelin (the Cornea book refers in passing to the TGFBI conditions as keratoepithelin dystrophies)

Endothelial Dystrophies
Corneal Dystrophies

Epithelial and Subepithelial Dystrophies

Epithelial-Stromal TGFBI Dystrophies

What does TGFBI stand for in this context?
Transforming growth factor beta induced

What is the name of the protein involved in the TGFBI dystrophies?
Keratoepithelin (the Cornea book refers in passing to the TGFBI conditions as keratoepithelin dystrophies)

What is the clinical hallmark of the keratoepithelin dystrophies?
Recurrent epithelial erosions

Endothelial Dystrophies
Epithelial and Subepithelial Dystrophies

What does TGFBI stand for in this context? 
Transforming growth factor beta induced

What is the name of the protein involved in the TGFBI dystrophies? 
Keratoepithelin (the Cornea book refers in passing to the TGFBI conditions as keratoepithelin dystrophies)

What is the clinical hallmark of the keratoepithelin dystrophies? 
Recurrent epithelial erosions
Corneal Dystrophies

Epithelial and Subepithelial Dystrophies

**Epithelial-Stromal** **TGFBI** Dystrophies

What does TGFBI stand for in this context?  
*Transforming growth factor beta induced*

To what does the term transforming growth factor beta *induced* refer?  
It refers to a protein, the production of which is controlled by a product of the transforming growth factor beta family.

What is the name of the protein involved in the TGFBI dystrophies?  
**Keratoepithelin** (the *Cornea* book refers in passing to the TGFBI conditions as *keratoepithelin dystrophies*).

What is the clinical hallmark of the keratoepithelin dystrophies?  
Recurrent epithelial erosions

The *Cornea* book considered this factoid important enough to make it one of three ‘Highlights’ for the Dystrophy chapter—take note of it!

Endothelial Dystrophies
Epithelial and Subepithelial Dystrophies

**Epithelial-Stromal** *(TGFBI)* **Dystrophies**

*What does TGFBI stand for in this context?*  
‘Transforming growth factor beta induced’

*What is TGFBI’s chromosomal location?*

Stromal Dystrophies

Endothelial Dystrophies
Epithelial and Subepithelial Dystrophies

**Epithelial-Stromal** \(\text{TGFBI}\) Dystrophies

*What does TGFBI stand for in this context?*  
‘Transforming growth factor beta induced’

*What is TGFBI’s chromosomal location?*  
5q31

Stromal Dystrophies

Endothelial Dystrophies
Epithelial-Stromal $TGFBI$ Dystrophies

*What does TGFBI stand for in this context?* ‘Transforming growth factor beta induced’

*What is TGFBI’s chromosomal location?* 5q31

*The TGFBI gene was formerly known as what?*
Epithelial-Stromal TGFBI Dystrophies

What does TGFBI stand for in this context?
‘Transforming growth factor beta induced’

What is TGFBI’s chromosomal location?
5q31

The TGFBI gene was formerly known as what?
BIGH3 (this factoid is important because you might encounter this name in the older literature)
Corneal Dystrophies

Epithelial and Subepithelial Dystrophies

Epithelial-Stromal TGFBI Dystrophies

Stromal Dystrophies

Endothelial Dystrophies

What are the six epithelial-stromal TGFBI corneal dystrophies?
Epithelial-Stromal *TGFBI* Dystrophies

1) Reis-Bücklers corneal dystrophy
2) Thiel-Behnke corneal dystrophy
3) Lattice, type 1
4) Lattice, variant types (III, IIIA, I/IIIA, IV)
5) Granular type 1
6) Granular type 2

What are the six epithelial-stromal *TGFBI* corneal dystrophies?

Stromal Dystrophies

Endothelial Dystrophies
Epithelial and Subepithelial Dystrophies

Epithelial-Stromal *TGFBI* Dystrophies
1) **Reis-Bücklers** corneal dystrophy
2) **Thiel-Behnke** corneal dystrophy
3) Lattice, type 1
4) Lattice, variant types (III, IIIA, VIIIA, IV)
5) Granular type 1
6) Granular type 2

Stromal Dystrophies

Endothelial Dystrophies
Epithelial and Subepithelial Dystrophies

Epithelial-Stromal TGFBI Dystrophies
1) Reis-Bücklers corneal dystrophy
2) Thiel-Behnke corneal dystrophy
3) Lattice, type 1
4) Lattice, variant types (III, IIIA, IIIIA, IV)
5) Granular type 1
6) Granular type 2

How do you pronounce this? RICE BOO-kler

How do you pronounce this? TEAL BEN-key

Stromal Dystrophies

Endothelial Dystrophies
Epithelial and Subepithelial Dystrophies

Epithelial-Stromal $TGFBI$ Dystrophies

1) **Reis-Bückler** corneal dystrophy
2) **Thiel-Behnke** corneal dystrophy
3) Lattice, type 1

What is the histologic hallmark of Reis-Bückler and Thiel-Behnke?

- Granular type 2 (Avellino dystrophy)

Stromal Dystrophies

Endothelial Dystrophies
Corneal Dystrophies

Epithelial and Subepithelial Dystrophies

Epithelial-Stromal TGFBI Dystrophies
1) Reis-Bücklers corneal dystrophy
2) Thiel-Behnke corneal dystrophy
3) Lattice, type 1

*What is the histologic hallmark of Reis-Bückler and Thiel-Behnke?*
Disruption/fragmentation of Bowman’s layer

Stromal Dystrophies

Endothelial Dystrophies
Epithelial- Stromal *TGFBI* Dystrophies

1. **Reis-Bücklers** corneal dystrophy
2. **Thiel-Behnke** corneal dystrophy
3. Lattice, type 1
4. **Granular type 2** (Avellino dystrophy)

What is the histologic hallmark of Reis-Bückler and Thiel-Behnke?

Disruption/fragmentation of Bowman’s layer

The corneal-dystrophy section of the Cornea book underwent a major revision recently. In what ‘category of corneal dystrophy’ were Reis-Bückler and Thiel-Behnke in previous editions?
Corneal Dystrophies

Epithelial and Subepithelial Dystrophies

Epithelial-Stromal TGFBI Dystrophies
1) Reis-Bücklers corneal dystrophy
2) Thiel-Behnke corneal dystrophy
3) Lattice, type 1
4) Lattice, variant types (III, IIIA, I/IIIA, IV)
5) Granular type 1
6) Granular type 2 (Avellino dystrophy)

What is the histologic hallmark of Reis-Bückler and Thiel-Behnke?

Disruption/fragmentation of Bowman’s layer

The corneal-dystrophy section of the Cornea book underwent a major revision recently. In what ‘category of corneal dystrophy’ were Reis-Bückler and Thiel-Behnke in previous editions? The ’Corneal Dystrophies of Bowmans’

Endothelial Dystrophies
Epithelial-Stromal TGFBI Dystrophies
1) Reis-Bücklers corneal dystrophy
2) Thiel-Behnke corneal dystrophy
3) Lattice, type 1
4) Lattice, variant types (III, IIIA, I/IIIA, IV)
5) Granular type 1
6) Granular type 2 (Avellino dystrophy)

What is the histologic hallmark of Reis-Bückler and Thiel-Behnke?
Disruption/fragmentation of Bowman’s layer

Important aside: When you hear ‘disruption/fragmentation of Bowman’s layer,’ a specific corneal ectatic disorder should come immediately to mind. Which one?

The ‘Corneal Dystrophies of Bowmans’
Corneal Dystrophies

Epithelial and Subepithelial Dystrophies

Epithelial-Stromal TGFBI Dystrophies

1) Reis-Bücklers corneal dystrophy
2) Thiel-Behnke corneal dystrophy
3) Lattice, type 1
4) Lattice, variant types (III, IIIA, I/IIIA, IV)
5) Granular type 1
6) Granular type 2 (Avellino dystrophy)

What is the histologic hallmark of Reis-Bückler and Thiel-Behnke?

Disruption/fragmentation of Bowman’s layer

Important aside: When you hear ‘disruption/fragmentation of Bowman’s layer,’ a specific corneal ectatic disorder should come immediately to mind. Which one? Keratoconus

The ’Corneal Dystrophies of Bowmans’

Endothelial Dystrophies
Epithelial-Stromal TGFBI Dystrophies

1) Reis-Bücklers corneal dystrophy
2) Thiel-Behnke corneal dystrophy
3) Lattice, type 1
4) Lattice, variant types (III, IIIA, IV)
5) Granular type 1
6) Granular type 2 (Avellino dystrophy)

What is the histologic hallmark of Reis-Bückler and Thiel-Behnke?
Disruption/fragmentation of Bowman’s layer

Important aside: When you hear ‘disruption/fragmentation of Bowman’s layer,’ a specific corneal ectatic disorder should come immediately to mind. Which one? Keratoconus

To finish off this aside: The Cornea book addresses four ectatic conditions. What are the other three?
--Keratoconus
--
Corneal Dystrophies

Epithelial and Subepithelial Dystrophies

Epithelial-Stromal \textit{TGFB1} Dystrophies

1) \textbf{Reis-Bücklers} corneal dystrophy
2) \textbf{Thiel-Behnke} corneal dystrophy
3) Lattice, type 1
4) Lattice, variant types (III, IIIA, I/IIIA, IV)
5) Granular type 1
6) Granular type 2 (Avellino dystrophy)

What is the histologic hallmark of Reis-Bückler and Thiel-Behnke?
Disruption/fragmentation of Bowman’s layer

Important aside: When you hear ‘disruption/fragmentation of Bowman’s layer,’ a specific \textit{corneal ectatic disorder} should come immediately to mind. Which one? Keratoconus

To finish off this aside: The Cornea book addresses four ectatic conditions.
\textit{What are the other three?}
--Keratoconus
--Keratoglobus
--Pellucid marginal degeneration
--Iatrogenic (ie, post-keratorefractive surgery)

Stromal Dystrophies

Endothelial Dystrophies

At what age does classic lattice type 1 begin to manifest?

Childhood to teens

How does it present? What is seen at the slit lamp?

Early in the disease, fleck-like central opacities and a diffuse stromal haze are present. Later, myriad crisscrossing refractile lines in the cornea predominate.

Is it painful?

Yes; pts get recurrent epithelial erosions

Does it affect vision?

Surface irregularity and stromal haze often results in decreased vision

What is the hallmark of lattice type 1 on light microscopy?

The presence of amyloid in the subepithelial space and anterior stroma

The presence of **amyloid** in the subepithelial space and anterior stroma

Endothelial Dystrophies
Lattice corneal dystrophy, type 1 (classic lattice). E, Light microscopy: Congo red prominently stains a continuous layer of amyloid (asterisk) that underlies and partially destroys the Bowman layer and intrastromal amyloid deposits corresponding to lattice lines (arrowheads). F, This same section viewed with polarized light confirms deposits are birefringent and red-green dichroic, thus amyloid. G, In vivo confocal microscopy image shows filaments corresponding to lattice lines within the stroma.

6) Granular type 2

\textit{Lattice, gelsolin type (aka…Meretoja syndrome)}

\textbf{Why is lattice, gelsolin type not grouped with lattice?} Because it is part of a \textbf{systemic syndrome}, it is no longer classified as a corneal dystrophy. (But given its corneal findings, we will touch briefly on it here.)

\textbf{What is the name of the syndrome?} \textbf{Meretoja syndrome}

\textbf{What are the systemic findings in Meretoja syndrome?} Amyloid deposition in the skin and perineural space leads to dermatochalasis, saggy skin, pendulous ears, and bilateral CN7 palsies. These findings culminate in a characteristic facial appearance known as ‘\textbf{bloodhound facies}.’

\textbf{What about the corneal findings?}
Corneal Dystrophies

Epithelial and Subepithelial Dystrophies

Epithelial-Stromal *TGFBI* Dystrophies

1) Reis-Bücklers corneal dystrophy
2) Thiel-Behnke corneal dystrophy
3) Lattice, type 1
4) Lattice, variant types (III, IIIA, II/IIIA, IV)
5) Granular type 1
6) Granular type 2

*Lattice, gelsolin type*

Stromal Dys (aka...Meretoja syndrome)

Why is lattice, gelsolin type *not* grouped with lattice? Because it is part of a **systemic syndrome**, it is no longer classified as a corneal dystrophy. (But given its corneal findings, we will touch briefly on it here.)

What is the name of the syndrome? **Meretoja syndrome**

What are the systemic findings in Meretoja syndrome? Amyloid deposition in the skin and perineural space leads to dermatochalasis, saggy skin, pendulous ears, and bilateral CN7 palsies. These findings culminate in a characteristic facial appearance known as ‘**bloodhound facies**.’

What about the corneal findings? They are essentially identical to those of lattice type 1

*At what age does GCD1 begin to manifest?*
Early childhood

*How does it present? What is seen at the slit lamp?*

- At what age does GCD1 begin to manifest?
  - Early childhood

- How does it present? What is seen at the slit lamp?
  - In early disease, tiny crumblike granules appear. As the disease progresses, the size and density of the granules increases. The granules never reach as far as the limbus.

- Is it painful?
  - Yes; pts get recurrent epithelial erosions

- Does it affect vision?
  - Glare and stromal haze result in decreased vision

- What is the histologic hallmark of GCD1 on light microscopy?
  - The presence of hyaline in the subepithelial space and anterior stroma (just like Reis-Bücklers). It stains bright red with Masson trichrome (just like Reis-Bücklers).

- What is the hallmark of GCD1 on electron microscopy?
  - Rod-shaped fibers (just like Reis-Bücklers)
Epithelial and Subepithelial Dystrophies

Epithelial-Stromal TGFBI Dystrophies

1) Reis-Bücklers corneal dystrophy
2) Thiel-Behnke corneal dystrophy
3) Lattice, type 1

5) Granular type 1
6) Granular type 2

At what age does GCD1 begin to manifest?
Early childhood

How does it present? What is seen at the slit lamp?
In early disease, tiny crumblike granules appear.

Stromal Dystrophies

Endothelial Dystrophies
Granular corneal dystrophy, type 1. A, In a child, early subepithelial verticillate-like opacities are evident by retro and direct illumination. B, With broad slit illumination, stromal deposits are both discrete and confluent, and are axially distributed in anterior stroma.
Epithelial and Subepithelial Dystrophies

Epithelial-Stromal TGFBI Dystrophies

1) Reis-Bücklers corneal dystrophy
2) Thiel-Behnke corneal dystrophy
3) Lattice, type 1
4) Lattice, variant types (III, IIIA, I/IIIA, IV)

6) Granular type 2

Corneal Dystrophies

At what age does GCD1 begin to manifest?
Early childhood

How does it present? What is seen at the slit lamp?
In early disease, tiny crumblike granules appear. As the disease progresses, the size and density of the granules increases. The granules never reach as far as the limbus.

Is it painful?
Yes; pts get recurrent epithelial erosions

Does it affect vision?
Glare and stromal haze result in decreased vision

What is the histologic hallmark of GCD1 on light microscopy?
The presence of hyaline in the subepithelial space and anterior stroma (just like Reis-Bücklers). It stains bright red with Masson trichrome (just like Reis-Bücklers).

What is the hallmark of GCD1 on electron microscopy?
Rod-shaped fibers (just like Reis-Bücklers)

Stromal Dystrophies

Endothelial Dystrophies
Granular corneal dystrophy, type 1. In an adult, more prominent diffuse granular opacities in the form of “snowfall” are apparent with direct (C) and retroillumination (D).
Epithelial and Subepithelial Dystrophies

Epithelial-Stromal TGFBI Dystrophies
1) Reis-Bücklers corneal dystrophy
2) Thiel-Behnke corneal dystrophy

Combined granular-lattice dystrophy; Avellino dystrophy

At what age does GCD2 begin to manifest?
Usually in the teen to early-adult years, can be younger

How does it present? What is seen at the slit lamp?
Basically, as a combination of GCD1 and lattice dystrophy:
The crumblike granules of GCD1, along with a version of the lattice lines seen in LCD

Is it painful?
Yes; pts get recurrent epithelial erosions

Does it affect vision?
Glare and stromal haze result in decreased vision

What is the histologic hallmark of GCD1 on light microscopy?
The presence of both **amyloid** and **hyaline** in the subepithelial space and anterior stroma.
Corneal Dystrophies

Epithelial and Subepithelial Dystrophies

Epithelial-Stromal TGFBI Dystrophies

1) Reis-Bücklers corneal dystrophy
