What are the four categories of corneal dystrophies?
Epithelial and Subepithelial Dystrophies

Epithelial-Stromal TGFBI Dystrophies

What are the four categories of corneal dystrophies?

Stromal Dystrophies

Endothelial Dystrophies
Corneal Dystrophies

Epithelial and Subepithelial Dystrophies

Epithelial-Stromal \textit{TGFBI} Dystrophies

\textit{What does TGFBI stand for in this context?}

Stromal Dystrophies

Endothelial Dystrophies
Corneal Dystrophies

Epithelial and Subepithelial Dystrophies

Epithelial-Stromal TGFBI Dystrophies

*What does TGFBI stand for in this context?*

‘Transforming growth factor beta induced’

Stromal Dystrophies

Endothelial Dystrophies
Corneal Dystrophies

Epithelial and Subepithelial Dystrophies

Epithelial-Stromal TGFBI Dystrophies

What does TGFBI stand for in this context?
‘Transforming growth factor beta induced’

To what does the term growth factor refer?

Stromal Dystrophies

Endothelial Dystrophies
Endothelial Dystrophies

Stromal Dystrophies

Epithelial and Subepithelial Dystrophies

**Corneal Dystrophies**

What does **TGFBI** stand for in this context? ‘Transforming growth factor beta induced’

To what does the term **growth factor** refer? To any of a diverse group of protein (or steroid) molecules that promote cell growth

Epithelial-Stromal **TGFBI** Dystrophies
Corneal Dystrophies

Epithelial and Subepithelial Dystrophies

Epithelial-Stromal **TGFBI** Dystrophies

*What does TGFBI stand for in this context?* ‘Transforming growth factor beta induced’

To *what does the term* growth factor *refer? To any of a diverse group of protein (or steroid) molecules that promote cell growth*

*Which growth factor is likely most familiar to ophthalmologists?* two words growth factor

Endothelial Dystrophies
Corneal Dystrophies

Epithelial and Subepithelial Dystrophies

What does TGFBI stand for in this context? ‘Transforming growth factor beta induced’

To what does the term growth factor refer? To any of a diverse group of protein (or steroid) molecules that promote cell growth

Which growth factor is likely most familiar to ophthalmologists? Vascular endothelial growth factor

Endothelial Dystrophies
Epithelial and Subepithelial Dystrophies

Epithelial-Stromal \textit{TGFBI} Dystrophies

\textit{What does TGFBI stand for in this context?} '\textit{Transforming growth factor} beta induced'

\textit{To what does the term transforming growth factor refer?}

Stromal Dystrophies

Endothelial Dystrophies
Corneal Dystrophies

Epithelial and Subepithelial Dystrophies

Epithelial-Stromal TGFBI Dystrophies

What does TGFBI stand for in this context? 'Transforming growth factor beta induced'

To what does the term transforming growth factor refer? A superfamily of related growth factors

Stromal Dystrophies

Endothelial Dystrophies
Corneal Dystrophies

Epithelial and Subepithelial Dystrophies

Epithelial-Stromal TGFBI Dystrophies

What does TGFBI stand for in this context?
Transforming growth factor beta induced

To what does the term transforming growth factor beta refer?

Endothelial Dystrophies
Corneal Dystrophies

Epithelial and Subepithelial Dystrophies

Epithelial-Stromal TGFBI Dystrophies

What does TGFBI stand for in this context?
Transforming growth factor beta induced

To what does the term transforming growth factor beta refer?
A subclass of transforming growth factors (the other subclass is, not surprisingly, transforming growth factor alpha)

Endothelial Dystrophies
Corneal Dystrophies

Epithelial and Subepithelial Dystrophies

What does TGFBI stand for in this context? 'Transforming growth factor beta induced'

To what does the term transforming growth factor beta induced refer?

Endothelial Dystrophies
Corneal Dystrophies

Epithelial and Subepithelial Dystrophies

What does TGFBI stand for in this context?

Transforming growth factor beta induced

To what does the term transforming growth factor beta induced refer?
It refers to a protein, the production of which is controlled by a product of the transforming growth factor beta family

Endothelial Dystrophies
Endothelial and Subepithelial Dystrophies

What does **TGFBI** stand for in this context?
Transforming growth factor beta induced

What is the name of the protein involved in the TGFBI dystrophies?
Keratoepithelin

What is the clinical hallmark of the keratoepithelin dystrophies?
Recurrent epithelial erosions
Corneal Dystrophies

Epithelial and Subepithelial Dystrophies

What does TGFBI stand for in this context?
Transforming growth factor beta induced

What is the name of the protein involved in the TGFBI dystrophies?
Keratoepithelin (the Cornea book refers in passing to the TGFBI conditions as keratoepithelin dystrophies)

Endothelial Dystrophies
Corneal Dystrophies

Epithelial and Subepithelial Dystrophies

Epithelial-Stromal \( TGFBI \) Dystrophies

What does \( TGFBI \) stand for in this context?
Transforming growth factor beta induced

What is the name of the protein involved in the \( TGFBI \) dystrophies?
Keratoepithelin (the Cornea book refers in passing to the \( TGFBI \) conditions as keratoepithelin dystrophies)

What is the clinical hallmark of the keratoepithelin dystrophies?

Endothelial Dystrophies
Corneal Dystrophies

Epithelial and Subepithelial Dystrophies

What does TGFBI stand for in this context?
Transforming growth factor beta induced

To what does the term transforming growth factor beta refer?
It refers to a protein, the production of which is controlled by a product of the transforming growth factor beta family.

What is the name of the protein involved in the TGFBI dystrophies?
Keratoepithelin (the Cornea book refers in passing to the TGFBI conditions as keratoepithelin dystrophies)

What is the clinical hallmark of the keratoepithelin dystrophies?
Recurrent epithelial erosions

Endothelial Dystrophies
Corneal Dystrophies

Epithelial and Subepithelial Dystrophies

Epithelial-Stromal TGFBI Dystrophies

What does TGFBI stand for in this context?
Transforming growth factor beta induced

What is the name of the protein involved in the TGFBI dystrophies?
Keratoepithelin (the Cornea book refers in passing to the TGFBI conditions as keratoepithelin dystrophies)

What is the clinical hallmark of the keratoepithelin dystrophies?
Recurrent epithelial erosions

The Cornea book considered this factoid important enough to make it one of three ‘Highlights’ for the Dystrophy chapter—take note of it!

Endothelial Dystrophies
Endothelial Dystrophies

Stromal Dystrophies

Epithelial and Subepithelial Dystrophies

**Epithelial-Stromal TGFBI Dystrophies**

*What does TGFBI stand for in this context?*  
‘Transforming growth factor beta induced’

*What is TGFBI’s chromosomal location?*

Stromal Dystrophies

Endothelial Dystrophies
Corneal Dystrophies

Epithelial and Subepithelial Dystrophies

Epithelial-Stromal **TGFBI** Dystrophies

*What does TGFBI stand for in this context?*  
‘Transforming growth factor beta induced’

*What is TGFBI’s chromosomal location?*  
5q31

Stromal Dystrophies

Endothelial Dystrophies
Epithelial and Subepithelial Dystrophies

What does TGFBI stand for in this context? ‘Transforming growth factor beta induced’

What is TGFBI’s chromosomal location? 5q31

The TGFBI gene was formerly known as what?
What does TGFBI stand for in this context? ‘Transforming growth factor beta induced’

What is TGFBI’s chromosomal location? 5q31

The TGFBI gene was formerly known as what? BIGH3 (this factoid is important because you might encounter this name in the older literature)
Epithelial and Subepithelial Dystrophies

Epithelial- Stromal TGFBI Dystrophies

1) ?
2) ?
3) ?
4) ?
5) ?
6) ?

What are the six epithelial-stromal TGFBI corneal dystrophies?

Stromal Dystrophies

Endothelial Dystrophies
Epithelial and Subepithelial Dystrophies

Epithelial-Stromal TGFBI Dystrophies
1) Reis-Bücklers corneal dystrophy
2) Thiel-Behnke corneal dystrophy
3) Lattice, type 1
4) Lattice, variant types (III, IIIA, I/IIIA, IV)
5) Granular type 1
6) Granular type 2

Stromal Dystrophies

Endothelial Dystrophies

Corneal Dystrophies

What are the six epithelial-stromal TGFBI corneal dystrophies?
Corneal Dystrophies

Epithelial and Subepithelial Dystrophies

Epithelial-Stromal TGFBI Dystrophies
1) Reis-Bücklers corneal dystrophy
2) Thiel-Behnke corneal dystrophy
3) Lattice, type 1
4) Lattice, variant types (III, IIIA, I/IIIA, IV)
5) Granular type 1
6) Granular type 2

How do you pronounce this?

Stromal Dystrophies

Endothelial Dystrophies
Epithelial and Subepithelial Dystrophies

Epithelial-Stromal TGFBI Dystrophies
1) Reis-Bücklers corneal dystrophy
2) Thiel-Behnke corneal dystrophy
3) Lattice, type 1
4) Lattice, variant types (III, IIIA, I/IIIA, IV)
5) Granular type 1
6) Granular type 2

Stromal Dystrophies

Endothelial Dystrophies
Corneal Dystrophies

Epithelial and Subepithelial Dystrophies

Epithelial-Stromal \textit{TGFBI} Dystrophies
\begin{itemize}
   \item 1) \textbf{Reis-Bücklers} corneal dystrophy
   \item 2) \textbf{Thiel-Behnke} corneal dystrophy
   \item 3) Lattice, type 1
\end{itemize}

\textbf{What is the histologic hallmark of Reis-Bückler and Thiel-Behnke?}

- Granular type 2 (Avellino dystrophy)

Stromal Dystrophies

Endothelial Dystrophies
Corneal Dystrophies

Epithelial and Subepithelial Dystrophies

Epithelial-Stromal TGFB1 Dystrophies
1) Reis-Bücklers corneal dystrophy
2) Thiel-Behnke corneal dystrophy
3) Lattice, type 1

What is the histologic hallmark of Reis-Bückler and Thiel-Behnke?
Disruption/fragmentation of Bowman’s layer

Stromal Dystrophies

Endothelial Dystrophies
**Corneal Dystrophies**

*Epithelial and Subepithelial Dystrophies*

**Epithelial-Stromal** \(TGFB1\) **Dystrophies**

1. **Reis-Bücklers** corneal dystrophy
2. **Thiel-Behnke** corneal dystrophy
3. Lattice, type 1
4. Lattice, variant types (III, IIIA, I/IIIA, IV)
5. Granular type 1
6. Granular type 2 (Avellino dystrophy)

*What is the histologic hallmark of Reis-Bückler and Thiel-Behnke?*  
Disruption/fragmentation of Bowman’s layer

*The corneal-dystrophy section of the Cornea book underwent a major revision recently. In what ‘category of corneal dystrophy’ were Reis-Bückler and Thiel-Behnke in previous editions?*

*Endothelial Dystrophies*
Epithelial-Stromal \( \text{TGFB1} \) Dystrophies

1) Reis-Bücklers corneal dystrophy
2) Thiel-Behnke corneal dystrophy
3) Lattice, type 1
4) Lattice, variant types (III, IIIA, I/IIIA, IV)
5) Granular type 1
6) Granular type 2 (Avellino dystrophy)

What is the histologic hallmark of Reis-Bückler and Thiel-Behnke?

**Disruption/fragmentation of Bowman’s layer**

The corneal-dystrophy section of the Cornea book underwent a major revision recently. In what ‘category of corneal dystrophy’ were Reis-Bückler and Thiel-Behnke in previous editions? The ’**Corneal Dystrophies of Bowmans’**
Corneal Dystrophies

Epithelial and Subepithelial Dystrophies

Epithelial-Stromal TGFBI Dystrophies
1) Reis-Bücklers corneal dystrophy
2) Thiel-Behnke corneal dystrophy
3) Lattice, type 1
4) Lattice, variant types (III, IIIA, I/IIIA, IV)
5) Granular type 1
6) Granular type 2 (Avellino dystrophy)

What is the histologic hallmark of Reis-Bückler and Thiel-Behnke?

Disruption/fragmentation of Bowman’s layer

Important aside: When you hear ‘disruption/fragmentation of Bowman’s layer,’ a specific corneal ectatic disorder should come immediately to mind. Which one?

Keratoconus

The 'Corneal Dystrophies of Bowmans'

Endothelial Dystrophies
Epithelial-Stromal \textit{TGFB1} Dystrophies

1) \textbf{Reis-Bücklers} corneal dystrophy
2) \textbf{Thiel-Behnke} corneal dystrophy
3) Lattice, type 1
4) Lattice, variant types (III, IIIA, I/IIIA, IV)
5) Granular type 1
6) Granular type 2 (Avellino dystrophy)

What is the histologic hallmark of Reis-Bückler and Thiel-Behnke?

\textbf{Disruption/fragmentation of Bowman’s layer}

\textit{Important aside: When you hear ‘disruption/fragmentation of Bowman’s layer,’ a specific corneal \textbf{ectatic} disorder should come immediately to mind. Which one? Keratoconus}

The ’\textit{Corneal Dystrophies of Bowmans’}"

Endothelial Dystrophies
**Corneal Dystrophies**

Epithelial and Subepithelial Dystrophies

**Epithelial-Stromal TGFBI Dystrophies**

1) **Reis-Bücklers** corneal dystrophy
2) **Thiel-Behnke** corneal dystrophy
3) Lattice, type 1
4) Lattice, variant types (III, IIIA, I/IIIA, IV)
5) Granular type 1
6) Granular type 2 (Avellino dystrophy)

What is the histologic hallmark of Reis-Bückler and Thiel-Behnke?

Disruption/fragmentation of Bowman's layer

**Important aside:** When you hear 'disruption/fragmentation of Bowman’s layer,’ a specific corneal ectatic disorder should come immediately to mind. Which one?

Keratoconus

To finish off this aside: The Cornea book addresses four ectatic conditions. What are the other three?

-- Keratoconus
--
--
--
**Corneal Dystrophies**

Epithelial and Subepithelial Dystrophies

**Epithelial-Stromal TGFBI Dystrophies**

1) **Reis-Bücklers** corneal dystrophy
2) **Thiel-Behnke** corneal dystrophy
3) Lattice, type 1
4) Lattice, variant types (III, IIIA, I/IIIA, IV)
5) Granular type 1
6) Granular type 2 (Avellino dystrophy)

**What is the histologic hallmark of Reis-Bückler and Thiel-Behnke?**

Disruption/fragmentation of Bowman's layer

**Important aside:** When you hear ‘disruption/fragmentation of Bowman’s layer,’ a specific corneal ectatic disorder should come immediately to mind. Which one?

Keratoconus

**To finish off this aside:** The Cornea book addresses four ectatic conditions.

What are the other three?

--Keratoconus
--Keratoglobus
--Pellucid marginal degeneration
--Iatrogenic (ie, post-keratorefractive surgery)

Endothelial Dystrophies

At what age does classic lattice type 1 begin to manifest?

At what age does classic lattice type 1 begin to manifest?

How does it present? What is seen at the slit lamp?

Early in the disease, fleck-like central opacities and a diffuse stromal haze are present. Later, myriad crisscrossing refractile lines in the cornea predominate.

Is it painful?

Yes; pts get recurrent epithelial erosions

Does it affect vision?

Surface irregularity and stromal haze often results in decreased vision

What is the hallmark of lattice type 1 on light microscopy?

The presence of \textit{amyloid} in the subepithelial space and anterior stroma

What is the hallmark of lattice type 1 on light microscopy? The presence of **amyloid** in the subepithelial space and anterior stroma

Endothelial Dystrophies
Lattice corneal dystrophy, type 1 (classic lattice).

E, Light microscopy: Congo red prominently stains a continuous layer of amyloid (asterisk) that underlies and partially destroys the Bowman layer and intrastromal amyloid deposits corresponding to lattice lines (arrowheads). F, This same section viewed with polarized light confirms deposits are birefringent and red-green dichroic, thus amyloid. G, In vivo confocal microscopy image shows filaments corresponding to lattice lines within the stroma.

5) Granular type 1
6) Granular type 2

\textit{Lattice, gelsolin type}

Stromal Dys (aka...Meretoja syndrome)

\textit{Why is lattice, gelsolin type not grouped with lattice?}

Because it is part of a \textbf{systemic syndrome}, it is no longer classified as a corneal dystrophy. (But given its corneal findings, we will touch briefly on it here.)

\textit{What is the name of the syndrome?}

\textbf{Meretoja syndrome}

\textit{What are the systemic findings in Meretoja syndrome?}

Amyloid deposition in the skin and perineural space leads to dermatochalasis, saggy skin, pendulous ears, and bilateral CN7 palsies. These findings culminate in a characteristic facial appearance known as \textit{‘bloodhound facies.’}

\textit{What about the corneal findings?}

---

At what age does GCD1 begin to manifest?

Early childhood

How does it present? What is seen at the slit lamp?

In early disease, tiny crumblike granules appear. As the disease progresses, the size and density of the granules increases. The granules never reach as far as the limbus.

Is it painful?

Yes; pts get recurrent epithelial erosions

Does it affect vision?

Glare and stromal haze result in decreased vision

What is the histologic hallmark of GCD1 on light microscopy?

The presence of hyaline in the subepithelial space and anterior stroma (just like Reis-Bücklers). It stains bright red with Masson trichrome (just like Reis-Bücklers).

What is the hallmark of GCD1 on electron microscopy?

Rod-shaped fibers (just like Reis-Bücklers).

---

**By what other names is GCD2 known?**

- Combined granular-lattice dystrophy
- Avellino dystrophy

---

At what age does GCD2 begin to manifest?

Usually in the teen to early adult years, can be younger.

How does it present? What is seen at the slit lamp?

Basically, as a combination of GCD1 and lattice dystrophy: The crumblike granules of GCD1, along with a version of the lattice lines seen in LCD.

Is it painful?

Yes; pts get recurrent epithelial erosions.

Does it affect vision?

Glare and stromal haze result in decreased vision.

What is the histologic hallmark of GCD1 on light microscopy?

The presence of both amyloid and hyaline in the subepithelial space and anterior stroma. The hyaline stains bright red with Masson trichrome; the amyloid stains with Congo Red, birefringes under polarized light.

What is the hallmark of GCD2 on electron microscopy?

Rod-shaped fibers, albeit in reduced numbers.

**How does it present? What is seen at the slit lamp?**
Basically, as a combination of GCD1 and lattice dystrophy:
The crumblike granules of GCD1, along with a version of the lattice lines seen in LCD

**Is it painful?**
Yes; pts get recurrent epithelial erosions

**Does it affect vision?**
Glare and stromal haze result in decreased vision

**What is the histologic hallmark of GCD1 on light microscopy?**
The presence of both **amyloid** and **hyaline** in the subepithelial space and anterior stroma.
### Epithelial-Stromal TGFBI Dystrophies

1) Reis-Bücklers corneal dystrophy
2) Thiel-Behnke corneal dystrophy
3) Lattice, type 1
4) Lattice, variant types
5) Granular type 1
6) **Granular type 2**

### Stromal Dystrophies

### Endothelial Dystrophies

---

**Corneal Dystrophies**

*By what other names is GCD2 known?*
Combined granular-lattice dystrophy; Avellino dystrophy

*At what age does GCD2 begin to manifest?*
Usually in the teen to early-adult years, can be younger

*How does it present? What is seen at the slit lamp?*
Basically, as a combination of GCD1 and lattice dystrophy:
The crumblike granules of GCD1, along with a version of the lattice lines seen in LCD

*Is it painful?*
Yes; pts get recurrent epithelial erosions

*Does it affect vision?*
Glare and stromal haze result in decreased vision

*What is the histologic hallmark of GCD1 on light microscopy?*
The presence of both **amyloid** and **hyaline** in the subepithelial space and anterior stroma.
Epithelial and Subepithelial Dystrophies

Epithelial-Stromal TGFBI Dystrophies
1) Reis-Bücklers corneal dystrophy
2) Thiel-Behnke corneal dystrophy
3) Lattice, type 1
4) Lattice, variant types (III, IIIA, I/IIIA, IV)
5) Granular type 1
6) Granular type 2

By what other names is GCD2 known?
Combined granular-lattice dystrophy; Avellino dystrophy

At what age does GCD2 begin to manifest?
Usually in the teen to early-adult years, can be younger

How does it present? What is seen at the slit lamp?
Basically, as a combination of GCD1 and lattice dystrophy:
The crumblike granules of GCD1, along with a version of the lattice lines seen in LCD

Is it painful?
Yes; pts get recurrent epithelial erosions

Does it affect vision?
Glare and stromal haze result in decreased vision

What is the histologic hallmark of GCD1 on light microscopy?
The presence of both amyloid and hyaline in the subepithelial space and anterior stroma. The hyaline stains bright red with Masson trichrome; the amyloid stains with Congo Red, birefringes under polarized light.

Stromal Dystrophies

Endothelial Dystrophies
Corneal Dystrophies

Epithelial and Subepithelial Dystrophies

Epithelial-Stromal TGFBI Dystrophies

1) Reis-Bücklers corneal dystrophy

**How does it present? What is seen at the slit lamp?**
Basically, as a combination of GCD1 and lattice dystrophy: The crumblike granules of GCD1, along with a version of the lattice lines seen in LCD

**Is it painful?**
Yes; pts get recurrent epithelial erosions

**How do the lattice lines in GCD2 differ from those in GCD1?**
- They tend to be shorter
- They tend to be whiter and less 'glasslike' (ie, not as refractile)
- They tend not to cross one another (ie, so they are less reminiscent of an actual lattice structure)

**What is the hallmark of GCD2 on electron microscopy?**
Rod-shaped fibers, albeit in reduced numbers

Epithelial and Subepithelial Dystrophies

Epithelial-Stromal TGFBI Dystrophies

1) Reis-Bücklers corneal dystrophy
2) Thiel-Behnke corneal dystrophy
3) Lattice, type 1
4) Lattice, variant types (III, IIIA, I/IIIA, IV)
5) Granular type 1
6) Granular type 2

These two primarily involve Bowman’s membrane
There are two ‘lattice’ forms
Two are ‘granular’ forms

Stromal Dystrophies

As a way to help remember them, think of the TGFBI dystrophies as consisting of three pairs of conditions: Two Bowman’s dystrophies, two lattice dystrophies, and two granular dystrophies

Endothelial Dystrophies
