EyeNet Magazine is the clinical newsmagazine of the American Academy of Ophthalmology. *EyeNet* prides itself on providing readers with practical clinical advice on ophthalmic care that they can use immediately in their practices.

EyeNet's print publication reaches approximately 20,000 ophthalmologists. Most of these are in the United States, with several hundred abroad. All articles are posted online for members worldwide to view.

The magazine is divided into departments and features that appear in every issue. Morning Rounds is one of *EyeNet's* best-read departments.

Morning Rounds: Mission and Definition

Morning Rounds is *EyeNet's* case-report section, intended to provide a medical “mystery” that intrigues and challenges readers.

Morning Rounds cases introduce the patient (fictitious names only) and his or her personal story and baffling symptoms. The case then can move on to any of the following areas: early misdiagnoses, your observations, differential diagnosis, tests results, the eventual definitive diagnosis, a few short paragraphs about the disease to add to readers' knowledge base (pathophysiology, etiology, etc), treatment and patient's progress.

All articles are doctor-written and are drawn from clinical experience.

How to Submit an Article

Before you start writing, contact Chris McDonagh, associate editor. He can let you know whether the topic has been covered recently and will work with you to set a mutually agreeable deadline for the manuscript.

EyeNet considers only material that is written originally and specifically for us. By submitting a manuscript for publication in *EyeNet*, you certify that it is your own original work and that you have not submitted it for publication elsewhere. If figures have been published previously, please secure a release.

There is no financial remuneration for published Morning Rounds articles, but a story authored by a resident physician and published in *EyeNet* will satisfy the RRC requirements for resident scholarly activity. The resident is responsible for notifying his or her program director of article publication.

How to Prepare Your Manuscript

Coauthor. Medical students, residents and fellows are advised to team with a senior faculty member to coauthor the manuscript.

Tone. Use active voice whenever possible. Be brief and clear. When appropriate, opt for a conversational style.

Introduction. In a storytelling style (and using a fictitious patient name), this short section introduces the patient, circumstances and symptoms.

Body. *EyeNet* uses subheadings to help readers easily navigate its stories (e.g., Early Misdiagnoses, What We Saw, Differential Diagnosis, What Tests Revealed, Definitive Diagnosis, About the Disease, Treatment, Patient's Progress, etc.).

References. We prefer to keep references to one or two.

Biographic and financial information. Provide author's name, title, institution, city, state and any financial disclosures related to products mentioned in the article.

Fact-checking. Writers are responsible for the accuracy of their stories. Be sure to fact check manuscripts before submission for statements of fact and spellings.

Word count. Approximately 1,250 words total.

Art. Your manuscript must be accompanied by at least one photo or illustration from initial evaluation. We run this under the headline "What's Your Diagnosis?" Typically, these provide a clue for readers.

Digital images must be 300 dots per inch resolution and at least 4" x 4". We accept images in JPG, TIF, EPS and BMP formats.

Alternatively, **hard copy images** may be sent to Chris McDonagh at the address above.

The Editorial Process: What You Can Expect

While *EyeNet* is not a peer-reviewed publication, the Morning Rounds articles undergo a rigorous multistage editing process.

Some highlights:

1. Reviewed by the Morning Rounds Editor

In deciding whether to accept your manuscript, the Morning Rounds Editor will review your manuscript for qualities such as:

- a) Appropriateness for *EyeNet* and Morning Rounds
- b) Content
- c) Writing

The Morning Rounds Editor will work with the submission author to fine tune the article as much as possible so that it is in final format prior to the review by the rest of the group.

2. Group Review

The manuscript then goes out for review to the Chief Medical Editor and Executive Editor for approval.

Our policy is to respond with a manuscript acceptance or rejection as early as possible, but we reserve the right to reject the manuscript at any point.

3. Manuscript Goes in the Queue

Reviewed manuscripts go into a database for use at an unspecified time. For editorial planning reasons, we may hang on to your manuscript up to one year before we commence the next step.

4. Staff Editor Edits Manuscript

a) Chris McDonagh, Associate Editor, thoroughly edits the article for Morning Rounds standards of editorial excellence. This may be a very heavy edit and may include structural changes.

Note: Chris may contact you with queries. Please reply to him within two days.

b) When this initial edit is completed, the article goes out for re-review to the author, the Morning Rounds Editor, the Chief Medical Editor and an *EyeNet* staff editor.

5. The Production Process

The manuscript goes to production, where it is laid out and formatted. This production process takes one month.

Rights

By submitting this manuscript and art, you agree to transfer all rights to the American Academy of Ophthalmology, meaning *EyeNet* may publish the article in its monthly magazine, and various other print and electronic publications, where it may remain archived indefinitely. You may republish this article elsewhere with written permission from *EyeNet Magazine's* Executive Editor.
