Which is more common in kids--orbital carcinomas, or sarcomas?
Which is more common in kids--orbital carcinomas, or sarcomas?
Sarcoma, by a mile. Carcinomas are vanishingly rare orbital tumors in kids
Which is more common in kids--orbital carcinomas, or sarcomas?
Sarcoma, by a mile. Carcinomas are vanishingly rare orbital tumors in kids.

What are the four most common orbital sarcoma primaries in children?
Which is more common in kids--orbital carcinomas, or sarcomas? Sarcoma, by a mile. Carcinomas are vanishingly rare orbital tumors in kids.

What are the four most common orbital sarcoma primaries in children?
--Rhabdomyosarcoma
--Osteosarcoma
--Chondrosarcoma
--Fibrosarcoma
Which is more common in kids--orbital carcinomas, or sarcomas?
Sarcoma, by a mile. Carcinomas are vanishingly rare orbital tumors in kids

What are the four most common orbital sarcoma primaries in children?
--Rhabdomyosarcoma
--Osteosarcoma
--Chondrosarcoma
--Fibrosarcoma
--Ewing sarcoma?

What about Ewing sarcoma? Doesn’t it present in the orbit?
Which is more common in kids--orbital carcinomas, or sarcomas? Sarcoma, by a mile. Carcinomas are vanishingly rare orbital tumors in kids.

What are the four most common orbital sarcoma primaries in children?
--Rhabdomyosarcoma
--Osteosarcoma
--Chondrosarcoma
--Fibrosarcoma
--Ewing sarcoma? Not as primary

What about Ewing sarcoma? Doesn’t it present in the orbit? Yes, but as a metastasis
Which is more common in kids--orbital carcinomas, or sarcomas?
Sarcoma, by a mile. Carcinomas are vanishingly rare orbital tumors in kids.

What are the four most common orbital sarcoma primaries in children?
--Rhabdomyosarcoma?
--Osteosarcoma?
--Chondrosarcoma?
--Fibrosarcoma?

Of these, which is most common?

Rhabdo, by a mile
The incidence of rhabdo is greater than that of the rest combined.
**Orbital Rhabdomyosarcoma**

Which is more common in kids--orbital carcinomas, or sarcomas? Sarcoma, by a mile. Carcinosarcomas are vanishingly rare orbital tumors in kids.

What are the four most common orbital sarcoma primaries in children?

--**Rhabdomyosarcoma**!
--Osteosarcoma
--Chondrosarcoma
--Fibrosarcoma

Of these, which is most common? Rhabdo, by a mile.
Which is more common in kids--orbital carcinomas, or sarcomas? Sarcoma, by a mile. Carcinomas are vanishingly rare orbital tumors in kids.

What are the four most common orbital sarcoma primaries in children?

- **Rhabdomyosarcoma**
- Osteosarcoma
- Chondrosarcoma
- Fibrosarcoma

Of these, which is most common? Rhabdo, by a mile

How much more common is rhabdo than the others?
**Orbital Rhabdomyosarcoma**

Which is more common in kids—orbital carcinomas, or sarcomas? Sarcoma, by a mile. Carcinomas are vanishingly rare orbital tumors in kids.

What are the four most common orbital sarcoma primaries in children?

--- **Rhabdomyosarcoma**!  
-- Osteosarcoma  
-- Chondrosarcoma  
-- Fibrosarcoma

Of these, which is most common? Rhabdo, by a mile

How much more common is rhabdo than the others? The incidence of rhabdo is greater than that of the rest combined.
Which is more common in kids--orbital carcinomas, or sarcomas? Sarcoma, by a mile. Carcinomas are vanishingly rare orbital tumors in kids.

What are the four most common orbital sarcoma primaries in children?

--**Rhabdomyosarcoma**!
--Osteosarcoma
--Chondrosarcoma
--Fibrosarcoma

Of these, which is most common?
Rhabdo, by a mile

How much more common is rhabdo than the others?
The incidence of rhabdo is greater than that of the rest combined.

*Rhabdo may be the most common orbital sarcoma, but is it a common condition in an absolute sense?*
Orbital Rhabdomyosarcoma

Which is more common in kids--orbital carcinomas, or sarcomas? Sarcoma, by a mile. Carcinomas are vanishingly rare orbital tumors in kids.

What are the four most common orbital sarcoma primaries in children?

- Rhabdomyosarcoma!
- Osteosarcoma
- Chondrosarcoma
- Fibrosarcoma

Of these, which is most common?
Rhabdo, by a mile

How much more common is rhabdo than the others?
The incidence of rhabdo is greater than that of the rest combined

Rhabdo may be the most common orbital sarcoma, but is it a common condition in an absolute sense? No, it is quite rare
Which is more common in kids--orbital carcinomas, or sarcomas? Sarcoma, by a mile. Carcinomas are vanishingly rare orbital tumors in kids.

What are the four most common orbital sarcoma primaries in children?

--Rhabdomyosarcoma!
--Osteosarcoma
--Chondrosarcoma
--Fibrosarcoma

Of these, which is most common? Rhabdo, by a mile

How much more common is rhabdo than the others? The incidence of rhabdo is greater than that of the rest combined

*Rhabdo may be the most common orbital sarcoma, but is it a common condition in an absolute sense? No, it is quite rare*

How many cases of orbital rhabdo occur in the US each year?
Orbital Rhabdomyosarcoma

Which is more common in kids--orbital carcinomas, or sarcomas? Sarcoma, by a mile. Carcinomas are vanishingly rare orbital tumors in kids.

What are the four most common orbital sarcoma primaries in children? 

--- **Rhabdomyosarcoma**! 
--- Osteosarcoma 
--- Chondrosarcoma 
--- Fibrosarcoma

Of these, which is most common?
Rhabdo, by a mile

How much more common is rhabdo than the others?
The incidence of rhabdo is greater than that of the rest combined

Rhabdo may be the most common orbital sarcoma, but is it a common condition in an absolute sense?
No, it is quite rare

How many cases of orbital rhabdo occur in the US each year?
Somewhere between 25 and 100
Which is more common in kids--orbital carcinomas, or sarcomas?
Sarcoma, by a mile. Carcinomas are vanishingly rare orbital tumors in kids.

What are the four most common orbital sarcoma primaries in children?
--Rhabdomyosarcoma!
--Osteosarcoma!
--Chondrosarcoma!
--Fibrosarcoma!

All that said, the presence of another, different malignancy greatly increases the risk of developing a childhood sarcoma. What is this other malignancy?
**Orbital Rhabdomyosarcoma**

Which is more common in kids--orbital carcinomas, or sarcomas? Sarcoma, by a mile. Carcinomas are vanishingly rare orbital tumors in kids.

What are the four most common orbital sarcoma primaries in children? --Rhabdomyosarcoma! --Osteosarcoma! --Chondrosarcoma! --Fibrosarcoma!

All that said, the presence of another, different malignancy greatly increases the risk of developing a childhood sarcoma. What is this other malignancy? Retinoblastoma (Rb) (But note: To convey an increased risk of sarcoma, the Rb mutation must be in the **germline**).
Orbital Rhabdomyosarcoma

Which is more common in kids--orbital carcinomas, or sarcomas? Sarcoma, by a mile. Carcinomas are vanishingly rare orbital tumors in kids.

What are the four most common orbital sarcoma primaries in children?
--Rhabdomyosarcoma!
--Osteosarcoma!
--Chondrosarcoma!
--Fibrosarcoma!

All that said, the presence of another, different malignancy greatly increases the risk of developing a childhood sarcoma. What is this other malignancy?
Retinoblastoma (Rb)

But note: To convey an increased risk of sarcoma, the Rb mutation must be in the germline.

As if a hx of germline Rb isn’t bad enough: One modality used to tx Rb increases the risk of a subsequent sarcoma even more. What is this modality?
Which is more common in kids--orbital carcinomas, or sarcomas?
Sarcoma, by a mile. Carcinomas are vanishingly rare orbital tumors in kids.

What are the four most common orbital sarcoma primaries in children?
--Rhabdomyosarcoma!
--Osteosarcoma!
--Chondrosarcoma!
--Fibrosarcoma!

As if a hx of germline Rb isn’t bad enough: One modality used to tx Rb increases the risk of a subsequent sarcoma even more. What is this modality? External-beam radiation treatment (XBRT). The increased risk of sarcoma is one reason clinicians use XBRT only reluctantly in the management of Rb.
Which is more common in kids--orbital carcinomas, or sarcomas? Sarcoma, by a mile. Carcinomas are vanishingly rare orbital tumors in kids.

What are the four most common orbital sarcoma primaries in children?
--Rhabdomyosarcoma
--Osteosarcoma
--Chondrosarcoma
--Fibrosarcoma

What is the cell of origin for rhabdo?
Orbital Rhabdomyosarcoma

Which is more common in kids--orbital carcinomas, or sarcomas?
Sarcoma, by a mile. Carcinomas are vanishingly rare orbital tumors in kids

What are the four most common orbital sarcoma primaries in children?
--Rhabdomyosarcoma
--Osteosarcoma
--Chondrosarcoma
--Fibrosarcoma

What is the cell of origin for rhabdo?
Undifferentiated/pluripotent mesenchymal cells (note: not the EOMs!)
**Orbital Rhabdomyosarcoma**

*Which is more common in kids--orbital carcinomas, or sarcomas?*  
Sarcoma, by a mile. Carcinomas are vanishingly rare orbital tumors in kids.

*What are the four most common orbital sarcoma primaries in children?*  
--Rhabdomyosarcoma  
--Osteosarcoma  
--Chondrosarcoma  
--Fibrosarcoma

*What is the cell of origin for rhabdo?*  
Undifferentiated/pluripotent mesenchymal cells (note: not the EOMs!)

*What is the classic presentation of orbital rhabdo?*
**Orbital Rhabdomyosarcoma**

*Which is more common in kids--orbital carcinomas, or sarcomas?*  
Sarcoma, by a mile. Carcinomas are vanishingly rare orbital tumors in kids.

*What are the four most common orbital sarcoma primaries in children?*  
--Rhabdomyosarcoma  
--Osteosarcoma  
--Chondrosarcoma  
--Fibrosarcoma

*What is the cell of origin for rhabdo?*  
Undifferentiated/pluripotent mesenchymal cells (note: not the EOMs!)

*What is the classic presentation of orbital rhabdo?*  
Rapid unilateral proptosis associated with lid edema and discoloration.
Which is more common in kids--orbital carcinomas, or sarcomas? Sarcoma, by a mile. Carcinomas are vanishingly rare orbital tumors in kids.

What are the four most common orbital sarcoma primaries in children?
--Rhabdomyosarcoma
--Osteosarcoma
--Chondrosarcoma
--Fibrosarcoma

What is the cell of origin for rhabdo?
Undifferentiated/pluripotent mesenchymal cells (note: not the EOMs!)

What is the classic presentation of orbital rhabdo?
Rapid unilateral proptosis associated with lid edema and discoloration

With what process is it often confused?
Which is more common in kids--orbital carcinomas, or sarcomas?
Sarcoma, by a mile. Carcinomas are vanishingly rare orbital tumors in kids.

What are the four most common orbital sarcoma primaries in children?
--Rhabdomyosarcoma
--Osteosarcoma
--Chondrosarcoma
--Fibrosarcoma

What is the cell of origin for rhabdo?
Undifferentiated/pluripotent mesenchymal cells (note: not the EOMs!)

What is the classic presentation of orbital rhabdo?
Rapid unilateral proptosis associated with lid edema and discoloration

With what process is it often confused?
Orbital cellulitis
Which is more common in kids--orbital carcinomas, or sarcomas? Sarcoma, by a mile. Carcinomas are vanishingly rare orbital tumors in kids.

What are the four most common orbital sarcoma primaries in children?
--Rhabdomyosarcoma
--Osteosarcoma
--Chondrosarcoma
--Fibrosarcoma

What is the cell of origin for rhabdo? Undifferentiated/pluripotent mesenchymal cells (note: not the EOMs!)

What is the classic presentation of orbital rhabdo? Rapid unilateral proptosis associated with lid edema and discoloration.

With what process is it often confused? Orbital cellulitis?

What can clue you in to the fact that a child has rhabdo, not cellulitis? Children with orbital cellulitis are usually systemically ill, and the affected eye hurts. In contrast, children with rhabdo seem well, and are in no pain. (Beware the child who presents with 'orbital cellulitis' and is playing happily in your waiting room!)
Orbital Rhabdomyosarcoma

Which is more common in kids--orbital carcinomas, or sarcomas?
Sarcoma, by a mile. Carcinomas are vanishingly rare orbital tumors in kids.

What are the four most common orbital sarcoma primaries in children?
--Rhabdomyosarcoma
--Osteosarcoma
--Chondrosarcoma
--Fibrosarcoma

What is the cell of origin for rhabdo?
Undifferentiated/pluripotent mesenchymal cells (note: not the EOMs!)

What is the classic presentation of orbital rhabdo?
Rapid unilateral proptosis associated with lid edema and discoloration.

With what process is it often confused?
Orbital cellulitis?

What can clue you in to the fact that a child has rhabdo, not cellulitis?
Children with orbital cellulitis are usually systemically ill, and the affected eye hurts.
Which is more common in kids--orbital carcinomas, or sarcomas?
Sarcoma, by a mile. Carcinomas are vanishingly rare orbital tumors in kids

What are the four most common orbital sarcoma primaries in children?
--Rhabdomyosarcoma
--Osteosarcoma
--Chondrosarcoma
--Fibrosarcoma

What is the cell of origin for rhabdo?
Undifferentiated/pluripotent mesenchymal cells (note: not the EOMs!)

What is the classic presentation of orbital rhabdo?
Rapid unilateral proptosis associated with lid edema and discoloration

With what process is it often confused?
Orbital cellulitis?

What can clue you in to the fact that a child has rhabdo, not cellulitis?
Children with orbital cellulitis are usually systemically ill, and the affected eye hurts. In contrast, children with rhabdo seem well, and 90% have no pain. (Beware the child who presents with ‘orbital cellulitis’ and is playing happily in your waiting room!)
**Orbital Rhabdomyosarcoma**

Which is more common in kids--orbital carcinomas, or sarcomas?
Sarcoma, by a mile. Carcinomas are vanishingly rare orbital tumors in kids.

What are the four most common orbital sarcoma primaries in children?
--Rhabdomyosarcoma
--Osteosarcoma
--Chondrosarcoma
--Fibrosarcoma

What is the cell of origin for rhabdo?
Undifferentiated/pluripotent mesenchymal cells (note: not the EOMs!)

What is the classic presentation of orbital rhabdo?
Rapid unilateral proptosis associated with lid edema and discoloration

With what process is it often confused?
Orbital cellulitis

Is there a racial and/or gender predilection regarding who gets rhabdo?
Orbital Rhabdomyosarcoma

Which is more common in kids--orbital carcinomas, or sarcomas?
Sarcoma, by a mile. Carcinomas are vanishingly rare orbital tumors in kids.

What are the four most common orbital sarcoma primaries in children?
--Rhabdomyosarcoma
--Osteosarcoma
--Chondrosarcoma
--Fibrosarcoma

What is the cell of origin for rhabdo?
Undifferentiated/pluripotent mesenchymal cells (note: not the EOMs!)

What is the classic presentation of orbital rhabdo?
Rapid unilateral proptosis associated with lid edema and discoloration.

With what process is it often confused?
Orbital cellulitis

Is there a racial and/or gender predilection regarding who gets rhabdo?
No to racial; there may be a slight male preponderance.
What is the average age at diagnosis? 5 to 7 years
What is the average age at diagnosis? 5 to 7 years
What is the average age at diagnosis?

5 to 7 years

Note: The ‘5-7’ range is from the most recent edition of the *Peds* book. OTOH, the *Orbit* book gives a range of 8-10. (FWIW, at the time of this writing the *Peds* book is the more recent edition.) The *EyeWiki* entry gives a range of 7-8. Caveat emptor.
Q

- What is the average age at diagnosis? 5 to 7 years
- What percent are diagnosed prior to age one year?
A

**Orbital Rhabdomyosarcoma**

- What is the average age at diagnosis?  
  5 to 7 years

- What percent are diagnosed prior to age one year? 5
Q

- What is the average age at diagnosis? 5 to 7 years
- What percent are diagnosed prior to age one year? 5

*Orbital Rhabdomyosarcoma*

*Does rhabdo in infancy (ie, before age 1) carry a better, or worse prognosis?*
What is the average age at diagnosis?  
5 to 7 years

What percent are diagnosed prior to age one year? 5

Does rhabdo in infancy (ie, before age 1) carry a better, or worse prognosis?  
Worse--it tends to be significantly more aggressive
What is the average age at diagnosis?
5 to 7 years

What percent are diagnosed prior to age one year?
5

What percent are diagnosed after age 16 years?
A

orbital rhabdomyosarcoma

- What is the average age at diagnosis? 5 to 7 years
- What percent are diagnosed prior to age one year? 5
- What percent are diagnosed after age 16 years? 10
What is the average age at diagnosis? 5 to 7 years
What percent are diagnosed prior to age one year? 5
What percent are diagnosed after age 16 years? 10

How does rhabdo presentation in a teenager differ from that in a younger child?
Orbital Rhabdomyosarcoma

- What is the average age at diagnosis? 5 to 7 years
- What percent are diagnosed prior to age one year? 5
- What percent are diagnosed after age 16 years? 10

How does rhabdo presentation in a teenager differ from that in a younger child? The course tends to be slower; eg, in a teen, the proptosis develops over a period of weeks rather than days.
What is the average age at diagnosis? 5 to 7 years

What percent are diagnosed prior to age one year? 5

What percent are diagnosed after age 16 years? 10

What are the 4 histological subtypes?

- Embryonal
- Alveolar
- Botryoid
- Pleomorphic
What is the average age at diagnosis? 5 to 7 years.

What percent are diagnosed prior to age one year? 5.

What percent are diagnosed after age 16 years? 10.

What are the 4 histological subtypes?
- Embryonal
- Alveolar
- Botryoid
- Pleomorphic
What is the average age at diagnosis? 5 to 7 years

What percent are diagnosed prior to age one year? 5

What percent are diagnosed after age 16 years? 10

What are the 4 histological subtypes?
- Embryonal:
- Alveolar:
- Botryoid:
- Pleomorphic: Rare in orbit

Which subtype is most common in the orbit? Embryonal

What proportion of cases are embryonal? About 80%

In which section of the orbit does embryonal tend to occur? The superonasal

What is the long-term survival rate? 95%
A

Which subtype has the poorest prognosis? **Alveolar**

What proportion of cases are alveolar? About 10%

In which section of the orbit does alveolar tend to occur? The inferior

What is the 5-year survival rate for alveolar rhabdo? 75%

The *Orbit* book mentions a 10-year survival rate of only 10% for alveolar. I’m not sure what to make of this--perhaps it’s referring to untreated disease? Caveat emptor.
What is the average age at diagnosis? 5 to 7 years
What percent are diagnosed prior to age one year? 5
What percent are diagnosed after age 16 years? 10
What are the 4 histological subtypes?
- **Embryonal**: 80% of cases. Superonasal. 95% survival.
- **Alveolar**: 10% of cases. Inferior. 75% survival.
- **Botryoid**: Rare in orbit
- **Pleomorphic**: Rare in orbit

The botryoid and pleomorphic subtypes are rarely found in the orbit.
Orbital Rhabdomyosarcoma

- Treatment
  - Small/well localized tumor: Excision
Treatment

- Small/well localized tumor: **Excision**

**Orbital Rhabdomyosarcoma**
Q

Orbital Rhabdomyosarcoma

Treatment

- Small/well localized tumor: **Excision**
- Don’t be aggressive in excising, because of risk of involvement of adjacent structures by the tumor.
Treatment

- Small/well localized tumor: **Excision**
  - *Don’t be* aggressive in excising, because of risk of involvement of adjacent structures by the **surgery**
Treatment

- Small/well localized tumor: **Excision**
  - Don’t be aggressive in excising, because of risk of involvement of adjacent structures by the **surgery**
- Larger/more extensive: [Blank] and [Blank]
A

Orbital Rhabdomyosarcoma

- Treatment
  - Small/well localized tumor: **Excision**
    - *Don’t be* aggressive in excising, because of risk of involvement of adjacent structures by the surgery
  - Larger/more extensive: **Chemo** and **RT**
Treatment

- Small/well localized tumor: **Excision**
  - Don’t be aggressive in excising, because of risk of involvement of adjacent structures by the surgery

- Larger/more extensive: **Chemo** and **RT**

- Orbital exenteration is rarely indicated
Treatment

- Small/well localized tumor: **Excision**
  - *Don’t be* aggressive in excising, because of risk of involvement of adjacent structures by the surgery
- Larger/more extensive: **Chemo and RT**
- Orbital exenteration is **rarely** indicated
Treatment
- Small/well localized tumor: **Excision**
  - Don’t be aggressive in excising, because of risk of involvement of adjacent structures by the surgery
- Larger/more extensive: **Chemo** and **RT**
- Orbital exenteration is **rarely** indicated

Prognosis
- **90%** long-term survival
Orbital Rhabdomyosarcoma

- Treatment
  - Small/well localized tumor: **Excision**
    - Don’t be aggressive in excising, because of risk of involvement of adjacent structures by the **surgery**
  - Larger/more extensive: **Chemo** and **RT**
  - Orbital exenteration is **rarely** indicated

- Prognosis
  - **90%** long-term survival overall
Q

**Orbital Rhabdomyosarcoma**

- **Treatment**
  - Small/well localized tumor: **Excision**
    - **Don’t be** aggressive in excising, because of risk of involvement of adjacent structures by the surgery
  - Larger/more extensive: **Chemo** and **RT**
  - Orbital exenteration is **rarely** indicated

- **Prognosis**
  - **90%** long-term survival overall
  - Orbital rhabdo has **best vs worst** prognosis of any location
Orbital Rhabdomyosarcoma

**Treatment**
- Small/well localized tumor: **Excision**
  - Don’t be aggressive in excising, because of risk of involvement of adjacent structures by the surgery
- Larger/more extensive: **Chemo** and **RT**
- Orbital exenteration is **rarely** indicated

**Prognosis**
- 90% long-term survival overall
- Orbital rhabdo has **best** prognosis of any location
Treatment

- Small/well localized tumor: **Excision**
  - Don't be aggressive in excising, because of risk of involvement of adjacent structures by the surgery
- Larger/more extensive: **Chemo and RT**
- Orbital exenteration is **rarely** indicated

Prognosis

- 90% long-term survival overall
- Orbital rhabdo has **best** prognosis of any location

---

_In evaluating a rhabdo pt, make sure you rule out:_

**Local metastasis by…**palpating for two areas **lymphadenopathy.**

**Systemic metastasis via…**three studies/procedures
Orbital Rhabdomyosarcoma

Treatment

- Small/well localized tumor: Excision
  - Don't be aggressive in excising, because of risk of involvement of adjacent structures by the surgery
- Larger/more extensive: Chemo and RT
- Orbital exenteration is rarely indicated

Prognosis

- 90% long-term survival overall
- Orbital rhabdo has best prognosis of any location

In evaluating a rhabdo pt, make sure you rule out:
- local metastasis by...palpating for cervical and preauricular lymphadenopathy.
- systemic metastasis via...CXR, lumbar puncture and bone-marrow biopsy
